Export Contact: Mr. Jake Meinema, President

Marketing Profile

Cantec Industrial Technologies Inc. is actively involved in exporting and international trade with many countries.

Cantec offers a full line of storage, handling, drying, and cleaning equipment for all grains, cereals, and pulse crops as well as complete lines for feed processing plants for hogs, poultry and cattle feed, and complete turnkey projects.

Cantec offers design work, consulting and supervision, and draws on over 40 years of experience with management staff in these areas.

To date, Cantec has supervised projects and sold goods into countries as Korea, Saudi Arabia, Russia, Thailand, Philippines, Malaysia, Nigeria, Trinidad, Slovakia, Mexico and the United States.

Cantec has capitalized in its many export experiences in the Canadian agriculture industry (through its parent company) to design systems for foreign markets as the requirements are remarkably similar, apart from climate considerations.

Cantec offers clients state-of-the-art technology. Presently, the company also has agents working in many of the countries to assist in its overall services (i.e. repairs, warranty work, and to carry an inventory on most items). The company handles its own freight forwarding through a very reliable freight forwarding company who also has many years of experience in export markets. The head office handles calls from foreign markets 24 hours a day, as this is very important when dealing with clients in many different time zones.

Cantec is currently bidding on projects in Russia, Europe and Asia.
