

THEY WORK IN BLOCKS OF TEN

Russian Maximilists Have Most Formidable Method of Organization.

St. Petersburg, Nov. 4. — Premier Stolypin's vigorous policy of divide and rule causes considerable confusion in the scattered ranks of the revolutionaries. His action in drawing a wide distinction between the Maximilist wing of the Socialist revolutionaries and the workmen. Socialist revolutionaries drives a wedge into the mass which favors an immediate revolution by physical force.

Among the eight persons hanged for the raid on the treasury van, were some who, it is supposed, did not actually hit anybody, but their membership in the Maximilists, who conducted the raid, and their presence on the spot with revolvers, was decided to be sufficient ground for their immediate execution.

The seizures made at the apartments of the Terrorist Rosenberg show that the Maximilists, whose title may be regarded as being derived from the policy of inflicting the maximum wreckage upon the Government, are organized units of ten. Each ten has a chief who co-operates with ten other chiefs of ten.

The chief of these latter is thus a centurion with one hundred disciplined followers, although he personally knows their ten sectional chiefs. This arrangement enables raids to be planned by three or four people in a back room where they are beyond suspicion by the police and the plots are actually carried out by perhaps forty of their followers.

Rosenberg was regarded as a centurion of the Maximilist party, as the seizure of his horses, carriages and collection of uniforms, some of which were those worn by civil dignitaries when attending receptions, showed that he had ample material for conducting revolutionary robberies and assassinations on the highest scale.

In striking contrast to the fate of the Maximilists, the Government has treated the leaders of the revolutionary workmen's council with the utmost moderation. The prosecutor announced that he did not ask for sentences involving any kind of convict labor. The result is that fifteen leaders were sent to reside within the boundaries of some province, accompanied by their families.

A couple of the other accused men must sit idly in the Petropavlovsk fortress for a few months, like an editor who has disobeyed some census regulation, and the remaining dozen are set free to return to their St. Petersburg comrades.

Yet these St. Petersburg comrades approve absolutely the Maximilist propaganda. They realize that their own inability this year to strike an effective blow against the Government orders the unflinching extermination of the Maximilists, may convert the latter back into mere nihilists and fanatics.

THE NEW SACK SUIT.

The Coat Is Made Without Vents in Side or Center or Back.

The president of the Semi-ready Company, who is the recognized authority on men's fashions, has just issued his annual booklet, describing and illustrating the new fall fashions for gentlemen.

A particularly good portrait of the new sack suit, with its graceful flare of the skirt and its slight conformation to the waist line is shown in the new book.

The coat is made without either side or center vents. It is the correct vogue this season, and in the eastern cities no other style can be sold.

McLean Bros. have the only Semi-ready tailoring agency in London, at 146 Dundas street.

TALKS ABOUT CATHEDRAL

Architect Bodley To Help Plan Episcopal Edifice.

London, Nov. 5. — G. F. Bodley, R.A.F.S.A., will sail for Washington on Nov. 21, at the invitation of the dean and chapter of the Episcopal Cathedral there to prepare preliminary plans for the new cathedral.

Talking on the subject today, Mr. Bodley said that the style of the cathedral, according to the expressed desire of the bishop and chapter, will be Gothic of the fourteenth century style.

"It will be useless, indeed it would be ill-judged, to attempt any description of the probable design," said Mr. Bodley. "It must be one to suit the site; indeed, it is the site that often dictates the characteristics of a well-considered building. No statement, therefore, of the plan or the leading features of the building can be given as yet. It is sufficient to say that it is the intention of all concerned to build a grand cathedral of that poetic style, of a wholly fresh, new design, while the ancient, beautiful style is reserved."

Henry Vaughan, a Boston architect who was formerly a pupil of Mr. Bodley, will become the partner of the old master in this work. Bodley was a pupil of Sir Gilbert Scott.

LIKE A THIEF IN THE NIGHT

That's how pain comes. We sit near an open window, get stiff neck or sore back. Perhaps cool off too quickly after exertion—rheumatism develops.

Spend what you may, but money can't buy anything better than Polson's Nerviline. Its penetrating power enables it to reach deep tissues—there why it cures aches that all else can't touch. For outward application we guarantee five times more strength than in any other liniment. Inwardly it's harmless and as sure as the hereafter to ease at once. Don't accept a substitute for Polson's Nerviline which is the one great household panacea of today.

FALCONER—JOHNSTON

Pretty Wedding at the Presbyterian Manse in Paisley.

The Presbyterian manse in Paisley was the scene of a quiet but exceedingly pretty wedding on Wednesday morning, when Miss Bessie A. eldest daughter of Rev. J. and Mrs. Johnston, was married to Mr. George E. Falconer, of Port Elgin. The ceremony was performed by the father of the bride, assisted by Rev. A. Mahaffy, of Port Elgin, the bridegroom's pastor. The bride was given away by her grandfather, Mr. Wm. Wilkie, of Toronto.

Miss Bella Johnston, sister of the bride, and Miss May Falconer, sister of the groom, were bridesmaids, and were dressed in cream and blue respectively, and carried pink roses. The bride's little sister, Nellie, was flower-girl and looked sweet in a cream silk robe, carrying a basket of flowers, wherein the wedding ring was concealed.

The bride's costume was of point d'esprit over silk, elaborately trimmed with lace and insertion and rose point yoke. The veil was one worn by the bride's mother at her wedding over 25 years ago.

The groomsmen were Mr. Ross Munro, of Toronto, and Mr. J. Johnston, of Boston, brother of the bride. Promptly at 10:30 a.m. to the strains of the wedding march, played by Miss Alice Bain, of Paisley, the bride and her attendants entered the drawing-room and took their places beneath a conventional wedding bell, suspended from an arch of evergreens decorated with holly and chrysanthemums. They were preceded by the bridegroom and his attendants, and here the couple took their vows. After the ceremony a sumptuous dinner was served. The toast to the bridal pair was proposed by Rev. A. Mahaffy and all joined in singing "For They Are Jolly Good Fellows."

Many elegant presents were received among which was a silver pudding dish from the choir of Knox Church, Paisley, of which the bride was a valued member; also a silver service from the bride's brothers and sisters, and a beautiful set of furs from her parents.

By the afternoon train the bridal party left on a trip to Toronto, Hamilton and Niagara. The bride's traveling suit was of brown chiffon broadcloth with hat to match.

Guests were present from Boston, Toronto, Hamilton and Port Elgin. On their return a well-furnished and cozy little home awaits the couple in Port Elgin. Mr. Falconer will be in Paisley on Friday, Nov. 9, and will receive with her mother at the manse from 3 to 6 p.m., where she will be pleased to meet with all her friends.

WOMEN AT OXFORD

Admitted for Examination, But They Cannot Graduate.

Washington, Nov. 4.—Louis Dyer, an American instructor at Oxford, in a pamphlet he has published for the information of American students, entitled "Oxford As It Is," says: "Women are not allowed to matriculate or graduate at the university, but are admitted to all examinations for degrees in arts and music. The names of successful candidates, together with the rank of the same, are published in the University Gazette and Calendar, the official publication of the university."

There are four institutions for the higher education of women at Oxford. The highest is Somerville College, founded in 1879, of which Miss Maitland is principal, and the standard is quite as high as that of any college in the university. Lady Margaret's Hall, Miss Fordworth principal, was also founded in 1879, and is under the care of the Church of England, but provision is made for Roman Catholic and nonconformist students. St. Hugh's Hall was founded in 1886, Miss Moberly principal, and is also intended for members of the Church of England. St. Hilda's Hall, Miss Burrows principal, was founded in 1893 and is a branch of a woman's college at Cheltenham.

Besides these regularly organized institutions there is "The Society of Oxford Home Students," under the supervision of Mrs. A. H. Johnson, which is intended for married women especially, and other non-collegiate students who pursue their studies at home. It is a sort of "home study circle," similar to the Chautauquus in the United States. Any student of the institutions named has the privilege of attending certain lectures at the university.

Quite a number of American girls are studying at Oxford. They are nearly all instructors in colleges and schools for women in the United States or are preparing themselves for such work. Mrs. Caird, wife of Dr. Caird, master of Balliol, is the mother of all American girls at Oxford, although she is a Scotchwoman and has never been in the United States. She always looks up newcomers, takes them under her wing, advises and assists them and looks after health and happiness with remarkable kindness. Every American girl student at Oxford is expected to lunch with Mrs. Caird on Sundays, and she gets them together at her house as frequently as possible. Louis Dyer, formerly of Chicago, and later of Harvard, also takes a great interest in American students and gives a great deal of his time to the promotion of their interests.

RUSSIAN FUEL CRISIS

Tariff May Be Adjusted to Allow American Oils to Compete.

St. Petersburg, Nov. 3.—A conference was held at the ministry of commerce today to consider measures for alleviating the fuel crisis. A project for the abolition of the duties on fuel oil in order to permit the importation of American oils to compete with the Russian fuel residuum, the price of which is now almost prohibitive, was discussed.

The abolition of the duties on fuel oil is advocated by the minister of commerce and the neutral Russian industrialists, who claim that oil can be imported by way of Libau at rates twenty per cent below the present prices. The representatives of the Bakou oil interests oppose the proposition.

A CLEVER RUSE LANDS WOMAN

Opens Box Sent to Another and a Dynamite Cartridge Explodes.

Milwaukee, Nov. 5. — Miss Lucia Ruscha, 32 years old, private secretary for the members of the architectural firm of Ferry & Clas, on Broadway, who lives at the home of her parents on Fifth street, was arrested today by the federal authorities charged with tampering with the mails. It is alleged that Miss Ruscha opened and tampered with the contents of the letters being addressed to Frank Bader, superintendent of the architectural department.

For more than two years complaints have been made to the postal department by Mr. Bader to the effect that his mail was frequently tampered with. In an endeavor to solve the mystery dummy letters, and packages have been mailed to him at his regular address, the mail carriers have been patiently shadowed from the time the mail left the office until the letters were delivered at the address and various other tricks have been resorted to no avail.

After every trick known to the department had been resorted to, Mr. Bader resolved to try a new one, and a "fake" plush jewelry box, such as is used by jewelers for the safekeeping of valuable articles when sent by mail, was procured and mailed to Mr. Bader. These boxes are so arranged that upon being opened a secret spring discharges a small dynamite cap, causing an explosion which may be heard a great distance.

A ring of small value was placed in the box, which was addressed to Mr. Bader at the office. The time of its arrival at the office was ascertained, and early today Detectives Laubheimer and Mulholland went to the office, where they secreted themselves in the toilet room. When the officers had been secreted but a few moments a loud explosion was heard from a room which Miss Ruscha had entered.

Rushing in, the detectives caught the girl standing with a dazed expression on her face, the "fake" jewel box open in her hands. Her arrest immediately followed.

The prisoner was taken to the police station and Inspector Bird notified. A warrant was sworn out before United States Commissioner Bloodgood, which was later served on Miss Ruscha. It is expected that the prisoner will be arraigned on Monday.

The authorities are at a loss to explain the acts of the defendant. They give it as their belief that Miss Ruscha has had violent dislike for Mr. Bader, and wished to annoy him. It was said that several cases of marital disagreement, which later were aired in the divorce courts, were some of the indirect results of Miss Ruscha's alleged acts.

THE LENGTHY LIFE

According to Writer Unsanitary Countries Have the Best Record.

London, Nov. 5.—A writer in an afternoon paper asks experts in sanitation to explain why longevity in Europe reaches the highest point in countries which pay the least attention to hygiene.

The highest percentage of centenarians is not in Great Britain, Germany or Switzerland, but in the Balkan states. Bulgaria leads with a total of 3,800 out of a population of 3,000,000. Roumania and Servia have 1,657 between them, while France can produce only 213, Great Britain 146, Germany 55 and Switzerland not one.

Taking an account of the past and present history of the Balkan territories one can hardly attribute the longevity of the inhabitants to the placid life they lead.

ROYALTY IN PERIL

Special Precautions to Protect Spanish Sovereign From Assassination.

Malaga, Spain, Nov. 3.—The local police have been advised that suspected anarchists have suddenly disappeared from Barcelona and consequently the most rigorous precautions are being taken for the protection of King Alfonso and Queen Victoria during her stay here. All the houses in the streets through which their majesties are to pass have been carefully searched. The Carlist committee throughout the peninsula will celebrate the name day of the pretender, Don Carlos, tomorrow.

The Cause of Sore Feet

Examine them carefully and you'll probably find corns. Whether hard or bleeding, apply Putnam's Corn Extractor. It's painless, it's sure, and above all quick to act. Insist on only "Putnam's."

After an absence of four months, in which he and his companion suffered great hardship in a vain effort to reach the summit of Mount McKinley, the highest peak in North America, Dr. Herschel C. Parker, professor of physics in Columbia University, has returned. Dr. Parker says that many discoveries of importance were made. One of these is that Mount McKinley is higher than had previously been supposed.

TO PREVENT IT BETTER THAN TO REPAIR IT.—A little medicine in the shape of the wonderful pellets which are known as Putnam's Vegetable Pills, administered at the proper time and with the directions adhered to, often prevent a serious attack of indigestion and nerve weakness which would go to the doctor. In all irregularities of the digestive organs they are an invaluable corrective, and by cleansing the blood they clear the skin of imperfections.

During 1905 there were wrecked, burned and foundered at sea 297 steam vessels, of a net aggregate tonnage of 353,611, and 294 sailing vessels of 214,900 tons.

ABSOLUTE SECURITY.

Genuine Carter's Little Liver Pills.

Must Bear Signature of

W. Wood
See Pac-Shall Wrapper Below.

Very small and so easy to take as sugar.

CARTER'S LIVER PILLS.
FOR HEADACHE, FOR DIZZINESS, FOR BILIOUSNESS, FOR TORPID LIVER, FOR CONSTIPATION, FOR SALLOW SKIN, FOR THE COMPLEXION.

THE S. S. BATTLESHIP RAMMED

The S. S. Monroe Rakes Big Fighting Machine in the Hampton Roads.

Norfolk, Va., Nov. 3.—The U. S. battleship Virginia was rammed today in the Hampton Roads by old Dominion liner Monroe. Both vessels came afterwards to this port. The Monroe, inland bound from New York, landed her passengers at her pier, while the battleship proceeded to the Norfolk navy yard. The Monroe was following the battleship through Hampton Roads when off Sea Swell the Virginia slowed down. Her steering gear had apparently been damaged and she sheered out of her course. The officers of the Monroe immediately rang to slow down but she could not stop nor even change her course in time, and she struck the battleship on the after-part of her armor belt, and raked her starboard davits were turned in board, while two six-inch after guns and one three-inch gun were raked. The Monroe sustained a bad twist of her keel plow. A survey will be made of both vessels.

BULL'S LIFE SAVED

Audience Hiss Fighter and Demand That Animal Be Saved.

Paris, Nov. 4.—The Petit Parisien relates the unusual occurrence of a bull being released at a bull fight at Valladolid.

The bull, which was a particularly fine animal and called Aldeano, fed out of the hand of his keeper and followed him about like a dog. These facts became known to the public, who applauded Aldeano when he was led into the arena.

The keeper cried bitterly that his bull had been killed, and his sobs so distracted the matador during the fight that the torador became nervous, and instead of killing the bull with a blow of his knife only wounded him in the shoulder.

The audience hissed the clumsy fighter, and then demanded that the bull be spared. The great shout was the uproar that the president of the bull fight was obliged to declare that Aldeano should not be killed.

NIGHT SCHOOL FOR POLICE

The Education of Many of Old London Bobbies Is Very Defective.

London, Nov. 5.—The fact, as stated by Sir Edward Henry, the chief commissioner of police, to the royal police commission, on Tuesday, that "reports of police constables are often extremely illiterate, many constables finding it difficult to write reports, owing to their defective education," has long been known to the authorities. Special police classes are now in connection with many evening continuation schools, both in London and the suburbs, the chief object being to teach the constables the force how to write reports on such things as street accidents, burglaries, cases of suicide and murders.

A reporter who paid a visit to one of the classes, found a number of the constables seated at desks in a school classroom.

"We specialize on burglaries and murders," said the teacher; "imaginary ones, of course." He picked up a paper from the desk of a constable, and read from a ghastly crime, written in a free, bold hand by a constable, who was imagining the circumstances of a murder.

A second paper was an essay on cats, setting forth the law as to what a "cat" is, and his "fare," and also the duties of the police. A third paper told how an arrest is made, and a fourth dealt with the removal of dead bodies.

"I have a police code," explained the teacher, "for my guidance, and I use that as a basis for the lessons. After a lesson—today the subject was perjury—the men get to work on reports and essays. They are also taught arithmetic, and they do a little reading, but the main subject is composition."

Very few of the men were born in London; nearly all of them come from the country. Their attainments are very diverse. Many of them are not above the level of attainment of a boy in the fourth standard.

HAVE YOU PILLS?
Dr. Leonard's Hem-Roid is an internal remedy that entirely removes the cause of piles, and cures to stay cured any case no matter how long standing.

If you have piles, and Dr. Leonard's Hem-Roid will not cure you, you get your money back.

A thousand dollar guarantee goes with every bottle of Hem-Roid sold.

If you want a perfect and permanent cure, ask for Dr. Leonard's Hem-Roid, the guaranteed remedy.

SOME NOVELTIES IN BUILDING METHODS

STEEL PILES AND ELECTRIC PILE DRIVER USED IN NEW YORK.

Steel piles and an electric pile driver make a combination of novelties sufficiently attractive to keep a line of people all the time looking over the railing in front of the excavation for the foundation of the new addition to the Hoffman House.

These piles are channel beams of a uniform length of about 30 feet; stacked up in the excavation, the piles waiting to be driven look like a pile of structural steel. For driving they are not sharpened or pointed in any way, as wooden piles are, but a beam is hoisted up between the leads or guides of the pile driver, set precisely in its proper place and position, and then simply driven down through the yielding earth to the desired depth.

As these channel steel piles are not to be used as supporting piles, they are not driven in clusters. They are driven as sheet piling, though not in long continuous lines, but here in assemblages in different parts of the excavation, each assemblage outlining a square inclosing an area six feet or more in diameter. They are faced alternately in and out, so that their flanges clasp, and down the joints thus formed are driven what are called Z-irons, with projections overlapping the edges of the flanges on the piles to make the joints tighter and help in keeping out moisture when these squares of sheet piling, practically so many square, steel-sided boxes driven deep into the earth, are brought to their final use, which is as a substitute for caissons in foundation building.

The earth within these squares of sheet piling will be excavated, and in these excavations will be built up the weight of the building will rest.

The electric pile driver has an upright frame just like that of any other pile driver and its hammer plays up and down in the leads just the same, with the wire rope from it running up to and over a sheave in the top of the frame and on down, all quite in the usual manner, to a drum at the back on the pile driver's base. But here you notice a new feature in the form of a low iron shield, shaped somewhat like the top shell of an elongated turtle. This shield covers the electric motor, which is geared to the drum.

There is no steam boiler set up here, no flaring fire, no pile of coal to feed the boiler's furnace, no steam engine attached to the drivers; the power comes from a street main through a flexible cable attached to the motor and made long enough so that the pile driver can be moved about anywhere within the excavation.

The pile driver operator turns the power on or off by means of a controller much like that used by the motorman on an electric street car, and for further control of the machine he uses a lever brake. And so, without

Three Dressy Styles New Black Chiffon Taffeta Silk Waists

This store has long been noted for the stylish dressiness of the Waists shown here.

Our buyers are ever on the lookout for new ideas—and always insist on good materials and careful workmanship being combined with the latest fashion fancies.

Here are three new dressy styles in soft, lustrous Black Chiffon Taffeta which should prove big favorites with our particular clientele.

Neatness is the characteristic feature of this Black Chiffon Taffeta Waist. Front is of large tucks, and the sleeves are large. Back is tucked. A charmingly simple but dressy waist.....\$3.50

Rows of fine tucks form three large box pleats, which give the front of this Black Chiffon Taffeta Waist a rather smart appearance—an appearance which is given a still more attractive air by an unique yoke effect, which is finished with four rows of silk stitching. Tucked cuffs on large sleeves. Tucked back.....\$4.00

Here is a Waist for those who want a very dressy-looking style which is free from frills and insertions and ornate trimmings. Front is a handsome combination of fine and large tucks, which are prettily edged with silk braid and trimmed with neat buttons. Tucked back.....\$4.25

Were you one of the ladies who have been inquiring for SLIP WAISTS to wear underneath the elegant lace blouses? Have them in stock now. Dainty Jap Silk kinds. Shades of ivory, pink and blue.....\$2.00
