Crochet Quilts

The Royal Stores, Ltd.

at corner of Bannerman and Gower Streets, provided the building was properly ventilated and covered with

uninflammable material. The following plans were passed subject to the approval of the City Engineer, and on the usual conditions:—(Dwelling) Jas. Lucas, Mc-6 Monroe Street; A. S. Wadden, Buchanan Street; G. Coish, LeMarchant Road; A. Budkingham, Job Street; Chas. Picco, Carter's Hill.

It was brought to the notice of the Board that many of the seats placed invarious parts of the city, such as the Promenade, St. Thomas' Avenue and of Garrison Hill (particularly the last mentioned) had been considerably damaged by some persons unknown. Such destruction of public property on the part of citizens is certainly to be regretted, and the Council intend making inquiries and having the guilty parties severely dealt with.

A discussion took place as to the motor traffic in Bowring Park, and it was unanimously decided that moter cars and cycles be not allowed to enter the Park.

Petitions were received from Tax owners with reference to the new traffic regulations, and it was decided that the Council will meet a deputation from the respective stands at a special meeting to be held for the purpose.

Reports of the City Engineer, Sanitary Supervisor, etc., were tabled, also the Health Report which showed seventeen new cases of Scarlet Fever in the city during the week.

Payrolls and accounts presented were ordered paid and requisitions for the Departments acceded to The meeting then adjourned.

Home Hints.

Washing Silk Stockings.

When washing silk stockings always use luke-warm water and a good soap lather. Never mangle them, and allow them to dry slowly, hanging them up by the toes. The majority of French women wash their silk stockings through after each time wearing. and many declare that the lives of their silk stockings is trebled by this

The Oil Duster. Have you ever used an oil duster for dusting polished boards, or polish-

ed wood of any description? Soak a clean duster in parafin and leave it for two or three hours before using to allow the superfluous off to evaporate. This will be found an excellent method for dusting. Every smut will be taken up as it will adhere to the surface of the cloth and not merely fly into a fresh spot.

Care of Off Stoves.

For a smoky oil stove there are many little "dont's" which should be observed. To begin with, never fill the tank to the brim, also a short wick is best. If the wick is too long, it gathers all the dirt in the oil, thus causing it to smoke and hurn hadly. If the stove is in constant use, take the fittings apart occasionally and boil them in soda water, rinse well and dry thoroughly before refitting. A new wick should be steeped in vinegar and dried well before using when it will burn well and give a clear, steady

light. Makeshifts in the Kitchen. If there are few pennies to spend on furnishing the kitchen, any number of makeshifts will answer just as well

as the real article A beer bottle filled with cold water makes a much cooler rolling-pin than the wooden affair. There is no need to spend money on pastry cutters, when a cup or glass or any lid of a small tin will answer the purpose just as well A small biscuit box, or other small tin box; enamelled white and bored with holes, is a splendid substitute for a sink drainer, and a small pot of enamel will freshen it up several time when shabby.

Sun's Rays Drive an Engine.

The sun's rays are used to generate power in a miniature engine which was the subject of a demonstration at the college of the city of New York by Mr. Bernard Grossman, a gradu-

A parabolic copper mirror focused the rays on a test tube of water, the heat causing steam, which in turn operated the tiny engine at a high

Mr. Grossman said that his invention could be used to provide light, heat, and power, or to operate motor

trucks. "Coal," added the inventor, "will,

before very long, be obsolete. "Every community will have its plant, where the sun's rays will be caught and concentrated. The millions of unites of energy from the sun which we now waste, while we continue to drain the earth of its oil and coal, will be put to use.'

The plan has been laid before several engineering experts, and an atempt to utilize it on a large scale
