

system are younger even than our own, and finally, even in countries which, like Mexico and the Republics of South America, we are supposed to regard as only semi-civilized, and where the instability of government and the frequent convulsions of social order would seem to render any fixed and comprehensive educational policy impossible, when we see that in each and all of these, a thorough plan of medical education is held essential for the welfare of the community, for the development of medical science, and for the interests of the medical profession itself. It is surely time to consider carefully if we are not sadly at fault in this; and if, while elsewhere the requirements of medical education have been made to keep pace with the growth of medical knowledge, with us they have not been controlled by other and far less proper influences. Now if we consider the present state of medical science and note the vast advances that have been made during the past twenty-five or thirty years in all of its departments; if we reflect upon the enormous extent of accurate information, of minute technical knowledge and of special practical training which is now required to fit a man to practice medicine scientifically, and to render to those sufferers who seek his help the full measure of the benefits which the healing art is now capable of bestowing, shall we be surprised at the careful and prolonged course of study that we find is imposed in all countries but our own upon the applicant for the degree of medicine?

Surely no one can fail to appreciate the enormous importance of having thoroughly trained and skilful physicians.

When overtaken by serious accident or illness, all other means of relief fail, and the most wealthy, the most powerful, the most illustrious must, like the poor and unknown, cast their dependence upon the skill which, under God's guidance, the physician shall display in battling with disease and death. No other study presents difficulties and complexities so great as those which beset the study of medicine. In no other occupation in life are such varied culture of the mind and training of the senses demanded. Yet I learn on inquiry that the average time of apprenticeship to the following trades or callings is—for barbers, three years; for carpenters, printers, turners, plumbers, pattern
