made, I will digress to speak of Kingston's water supply. Kingston obtains its water from the lake (Ontario), at a poin. (C), 2500 feet from shore (30 feet from bottom and from surface). as will be seen in accompanying map, (fig. 1). It was first proposed to take the supply from the point B, 1300 feet out from shore but the water there was found not to be any superior to that close in shore.
