

years in anemic convalescents, with uniformly satisfactory results. In none of the cases under our observation did any untoward symptoms accompany or follow the use of this preparation. In no case did constipation, nausea, headache, or digestive difficulties follow its administration.

The results recorded here correspond with those obtained with the use of pepto-mangan by Loomis<sup>5</sup>, Van Schaick<sup>6</sup>, and Von Ramdohr<sup>7</sup>, of New York; Peterson, Perekhan, Doehring<sup>8</sup>, of Chicago; Wolffe<sup>9</sup>, of Philadelphia; Summa<sup>10</sup>, and Bauduy<sup>11</sup>, of St. Louis; Von Ruck<sup>12</sup> of Asheville, N.C.; McGuire<sup>13</sup>, of Richmond, Va.; Frieser<sup>14</sup> and Pohl<sup>15</sup> of Vienna, and Fasano<sup>16</sup>, of Naples.

On the whole, therefore, we have found pepto-mangan a very satisfactory and efficient hematinic in secondary anemias.
