is mentioned we are prone to take it more as a joke than as a reality with possibilities for revolutionizing the world's things.

possibilities for revolutionizing the world's transportation.

There is nothing capable of bringing realities being like seeing for oneself. So many of us are like the doubting Thomas of other days. Toronto just now has something beautiful and striking in the realm of aeroplanes which to those who see it and are witness to some of the things of which it is capable, will bring the lesson of the great resources of the air more forcibly to mind than volumes of reading and weeks of lectures could do.

Pollay Brothers of Belleville are the builders and exhibitors of the beautiful machine. It is 35 feet long by 30 feet across and is built of the lightest and most durable materials procurable. It is supported on five wheels,

ART AUTHORITY ON

Prof. Parsons, who is president of

With the one exception of the airship now on exhibition at Simpson's, there is no machine of Canadian make in the country. Much of this indifference due to the stress which has been

Russia just now is showing its under-standing of the possibilities by having its order in for two thousand of the wonderful 20th century travelers. The Pollay Brothers, who are enthusiasts in their work are environs to have in their work, are anxious to have Canada represented in the great exhibit of aeroplanes, which will take place at the coming Panama exhibi-

They feel assured that they can lead the world if they but get the chance. feet across and is built of the lightest and most durable materials procurable. It is supported on five wheels, two at each side and one in front, and has stays like long slender masts. In its construction it follows nature and the building of this patriotic wish. This is the present situation.

There is, however, little doubt but that at the conclusion of the two weeks' stay which the airship and its guardians intend making in Toronto, and when the Toronto public have seen the beautifully proportioned machine and the feats it will accomplish, and the prosecution of the work. The machine would take months to complete, and to have place at the Panama Pa-

sides the pilot. It was designed by Mr. Davidson, who for three years was superintendent of the well-known Curtiss Company. The value of the beautiful machine is approximately \$8600.

In conversation with Mr. Pollay, The World learned that in his opinion it will not be six months before trans-Atlantic mail will be carried by air-ships which will make the trip from Newfoundland to the Irish coast in 15 hours. This is revolutionizing things with a vehgeance.

Canada Lags Behind.

Canada is so far behind other countries in the matter of being interested in the aeroplane movement that for all practical purposes the quality of interest may be said to be nonexistent.

Discovering the Attic

A LMOST every house has an attic, but the conveniences of these sectuded places have not all been put to use. Sometimes this is because the room is not needed, but more often it happens the top floor is not ventilated, lighted or heated properly. Again it may only be-used for storage or for drying clothes in wet weather. This is certainly the only use that is made of unplastered attics that are dreary and ugly; overhung with dusty webs and scarcely fit for the uses made of them

of them.

The college towns of our country have shown us what may be done with attics, no matter how unsightly they are in the beginning.

The lighting problem must be solved first; of course gas or electricity should be used if practicable, but splendid lights are provided with the modern, improved oil burning lamps and acetylene gas burners. Sufficient daylight is harder to provide, but this can be had with a skylight, and such an arrangement gives the needed fresh air summer and winter.

The plastering of unfinished parts of houses is undoubtedly the bugbear that has made your top floor almost useless, for lathing and plastering is expensive and so tedious a job that the man of the house dreads undertaking it. But modern improvement has cared for this too, or rather done away with plastering by providing something much better in the shape of wallboard.

This covering can be put on without any under-foundation, except a

rather done away with plastering by providing something much better in the shape of wallboard.

This covering can be put on without any under-foundation, except a heavy studding here and there, to hold the nails that secure it. It is superior to lath, plaster, canvas or any other form of wall coverings, for it keeps out cold and heat and is indestructible.

The material comes in sheets from thirty-two to sixty inches wide and in any length up to twelve feet. There are several varieties made and the price is regulated by the thickness of the wall-board selected. It is less than half the cost of plastering even when the finest board is used. Any building supply company will give estimates for this sensible wall finish, and after it is purchased it only remains to hammer the sheets into place with wire nails. Where the edges of the wall-board join, a border is used, and this gives an artistic, paneled effect that is as handsome as the best paper produces. These borders are of wood fibre and are also nailed on, or paper borders may be used.

There is a wide choice of flat, or grained, or granite tones to choose from in this material, and this flat, soft-tinted surface is always safe for any wall finish. Later, if you tire of the monotone, you can paint or paper over the board for a change.

What Have You Decided to

Do With Your Grounds?

Not yet will you be able to see the retty, fresh, green and white blosoms of crinkleroot, but you may roam mong the woods and seek its favorite dunts. You may even find the intented three-leafleted leaf issuing on nort stems, on either side from the need stalk.

Crinkleroot is shy, and loves to hide

Crinkleroot is shy, and loves to hide sehind old stumps near the water's hargin like the rest of the cress amily in moist old mold, where rows the goldthread, the anemone, and the bloodroot, or on sloping

banks.

"And nearer to the river's frembling edge" you may dig up the fleshy, twisted, crinkled root of the "toothwort," which, with, "penper-root," is another familiar name of this well-known wild plant.

"Toothwort," because of the fancied resemblance the long toothed rootstock bears to a row of ancient jagged teeth, and "penper-root," because of

teeth, and "pepper root" because of the sharp biting of the tongue when asting pepper root, as Burroughs

A surprise and challenge to the

Tho one may not yet for two weeks find the plant blossoming, yet search for the two-leaved stem, and having found it, watch for the blossoms. When you remember that these leaves recall slightly in color the bright green marsh plants; that each of the two stem leaves is made up of three pointed and foothed, broad-based leaflets, just above which the loose raceme of buds will come: that two other leaves. just above which the loose raceme of buds will come; that two other leaves, similar in shape but larger, grow up on separate stems from the horizontal root stalk; that these latter leaves are tinted, as to the stem, with a deep purplish hue neaver the root; and that the entire piant is under six inches in height, you will have a few points to guide in the search.

Later, when you see the frail, white four-petaled, cross shaped blossoms, green-sepaled and yellow-centred, faintly fragrant, you will say with Shelley:

"White blossoms, whose wine was the bright dew, Yet drained not by the day."

With every short flower talk will be appended the explanation of one common botanical term. We may as

well be learning something as we go

A petiole is the stem of a leaf in contradistinction to any other stem.

Book Review

The Spiritual Message of Dante

Dante should be available to all without the least manner of doubt, a blot on the landscape. Hide them since you must have them.

And now the soil. Is it sandy or of approach to the study and underloamy, or levely putty-like clay, from recent fillings-in dumped from nearby buildings? Never despair. We'll tell that the student only finds what her buildings and the most helpful property and the most helpful property. row. Slake down the index of the thermometer until it is below the arrow mark, now draw the arm away from the side and put the bulb of the thermometer well up into the armpit, then hold the arm close against the side of the cheest for five minutes; on removal the top of the doke will mark the side of the cheest for five minutes; on removal the top of the doke will mark the side of the cheest for five minutes; on removal the top of the doke will mark the situation of your grounds. What is the wanth exposure? Is your feet to take the temperature and the thermometer in to take the temperature and that the instrument ln its crease. The skin should be gently rubbed first, as any perspiration will prevent accuracy. Care must be taken that no article of clothing intervenes between the skin and the thermometer, and that the instrument does not shift from the proper position.

Some limes the temperature is taken by introducing the bulb of the mere and that taken on the surface of the body.

A slight cold will often send the temperature of a child up to 102 or 103 degrees, and it rises even higher in adult. When the temperature goes and significance in a child than in an adult. When the temperature goes and the temperature goes in number. Both are normal. se and respirations will innumber. Both are normalipid in children than in clinical thermometer may for 75 cents.
