

COBALT TAKE VEINS AS PROMISING FIELD -- COBALT

THE MARKET VAGARIES NO INFLUENCE ON CAMP

Enlarged Plants Are Being Put in on Many Properties—New Gold Fields.

COBALT, Aug. 23.—(From the Man on the Spot.)—Despite slumps in stock, gold feet or labor troubles, Cobalt camp is busy from one end to the other.

Enlarged plants are being installed at various properties and, at several of the properties fighting the union, full forces are at work.

At the Conslags Mine one hundred and fifteen men are employed and five drills running by day and four by night. The new building for the concentrator is being completed and when this is finished the Conslags will have a complete set of camp buildings. The building for the concentrator has been erected and the shaft on the hill, which will render the ore easily handled. Cement foundations and abutments for all the machinery have been finished and the stability is ensured. The machinery, consisting of a 90-horse-power automatic Armstrong engine, a 100-ton crusher, 3 belt elevators, 125 ft. of 24-in. rolls, 3 vanners, 3 trombles, one Huntington mill, is all on the ground or in place, and all is now required in the shafting. The mill will then be set in motion. This machinery works automatically and from twelve to fourteen men can operate it. It has a daily capacity of one hundred tons, and it will treat the ore on the dump and the low grade ore now left underground.

Two cars of ore have been shipped this month, and two more will go before the end of the month. One is high-grade and one of second. Supt. Redington hopes to ship one car per day a few weeks hence.

Thirty men are working at the Tretway and some rich ore is being taken out. This property, in its early history, was not included in the immediate neighborhood, but it has been rapidly got into as good shape as any property in camp.

New Veins Located.

A new vein was located yesterday in the bottom of the shaft at the Temiscaming. It is said in camp its discovery was an event of importance. The arrival in Cobalt of C. A. Richardson. This company is busy at underground development work. The new vein was found at a depth of 75 feet and is a rich silver-calcite vein averaging six inches in width. This company has a large interest in the adjoining vein known as "Gans" or "Penny" vein, and work will begin this week on it. The old stock of the Temiscaming is now being re-arranged for the new lease. The old stock of the old stock Secretary Alex. Faskin issues two and a half shares of new stock.

Supt. Stephens is doing good work at the Beaver, and has probably eight or ten men at work. Shaft No. 1 is now down eight feet, and will be continued for another 100 feet. This shaft is sunk on a vein which, at the surface, had a width of two inches and at the bottom of the shaft has widened to fourteen inches, a good strong cobalt with silver values. Shaft No. 2 is sunk at a depth of 75 feet and will be sunk to a depth of 75 feet, when a cross-cut will be run to vein No. 2, and at this level the attention is to be given to the vein. All the ore will be brought up shaft No. 1, which will be the working shaft. No. 2 vein is a wide cobalt with silver values. Shaft No. 3 has been installed and one drill is kept running.

George McDougall is now in charge at the Cochrane, and they are sacking ore here. Two shafts are being sunk, one is down 50 ft. and the other, over near the Temiscaming, is down thirty feet. Twenty-two men are at work, and union wages are being paid.

At the Duchess twenty-four men are at work, and their main shaft is down 82 feet.

At the Drummond Supt. Briggsstock has 25 men working, and four drills running.

In Charge of Three Properties.

S. R. Heakes is the new mining engineer in charge of the operations at Kerr Lake, Jacobs, and Nova Scotia and Peterson Lake properties. Ninety tons of rich ore from the first named property have recently been shipped, and the new plant is practically installed. It consists of two 100-horse-power boilers, a 14 drill compressor, steam hoist, etc., which are installed in the power house, which is one of the largest and best constructed in the Township of Coleman. The Jacobs has already a first-class plant, which will be kept in full operation in the power-house near vein No. 3, which continues to be the principal vein, and some of the richest ore in camp has been shipped from this vein No. 3.

Vein No. 3 is a big Cobalt vein traced to the shore of Kerr Lake, and Vein No. 7 is one of the strongest veins in the camp. A tunnel has been run in this vein from the shore of Kerr Lake for a distance of two or three hundred feet, so that it is now being mined under the traveled road. A shaft is being sunk on the vein near the shore of Kerr Lake, and it is now down about 40 feet. At about this depth a junction occurs of the two branch veins, each of which has a surface width of from three to four inches. Where they unite solid ore shows eighteen feet, and which carries several thousand ounces of silver to the ton.

A cement collar has been built around the top of the shaft, and substantial timbers have been laid, which make a massive cribwork, as the foundations for the new shaft house, which will be erected.

Grading is being done on the T. & N. O. Kerr Lake spur on the Jacobs property, and the work will now proceed to the south of Coleman and Lorraine.

It is the intention of Mr. Heakes to

Install a much larger plant at the Nova Scotia Mine, as the one plant will be used to operate that mine and Peterson Lake. The mining rights of Peterson Lake are reserved to Cobalt as one of the greatest prospects in the district, and as possessing the greatest possibilities. There are over 110 acres in this proposition and it will now be worked for all that it is worth.

Claims in Temagami Reserve.

W. A. Verrier of Cobalt has prospectors out in the Temagami reserve all summer and as a result has staked one hundred and twenty acres one and a half miles from Temagami station, and about half way between Temagami and Gray's siding. Sixteen veins have been located, and one of them is a calcite vein several feet in width. Gold, copper and silver values and as high as \$49 worth of arsenic to the ton. One assay showed \$29 in gold to the ton, and 4-1/2 ounces of silver. Mr. J. Frith, the well-known geological manufacturer, associated with Mr. Verrier, and their property has been named "The Old Abe." Ten men are employed on the property.

News from the Elk Lake district, up the Montreal River, continues to be very encouraging. The latest rich discovery was made by Larry Downey at a depth of ten feet in a test shaft. A four-inch calcite vein was found, which is a mass of native silver, valued at ten thousand dollars, and his ore body is from 50 to 200 feet wide. The rock here has no covering of soil and is exposed.

The new discoveries were made by Swedes working for Messrs. Chandler, Gibson and Sterling, who are contractors, and have been made at the foot of the mountain of Night Hawk Lake, in the unsurveyed Township of Macklem, and free gold as large as peas is being freely developed.

A Detroit syndicate are working some adjacent claims, and they have good showings. Mr. Herman made discoveries and staked some locations. Among others working in the district is J. J. Johnston, the manager of Rothchild's mine, who has staked a large part of the crop will only make fodder. There was more or less profit in the strike, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month. There are many cars of stock knocking about which will be great bargains as Cobalt property, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month. There are many cars of stock knocking about which will be great bargains as Cobalt property, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month.

First One to Locate.

David G. Allen, former superintendent at the Violet Mine, Cobalt, has the honor of having located the first-class claim in this section. This was done a year ago, and he has since for and got three hundred and twenty acres in lots eight and nine in the first and second concessions of the Township of Whiting, about four miles west of Night Hawk Lake. He has a body of ore carrying fifteen ounces of silver to the ton, and is worth \$100,000, and his ore body is from 50 to 200 feet wide. The rock here has no covering of soil and is exposed.

The new discoveries were made by Swedes working for Messrs. Chandler, Gibson and Sterling, who are contractors, and have been made at the foot of the mountain of Night Hawk Lake, in the unsurveyed Township of Macklem, and free gold as large as peas is being freely developed.

There was more or less profit in the strike, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month. There are many cars of stock knocking about which will be great bargains as Cobalt property, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month.

Gradual Improvement is Shown in the Markets for Cobalt Issues.

World Office Monday Evening, Aug. 26.

There was only a moderate improvement for the mining shares to-day, but this sufficed to keep the market steady, and in several instances to cause advances. The absorption of most of the floating supply of Cobalt stocks has left the market pretty bare of offerings, and traders are not conspicuously given to putting out any extensive new short lines. The tenacity of holders is doing much to improve quotations, and it is believed that with the development of any new buying power of importance a sharp rally in prices would ensue. Present purchasers are those who regard the market as having been thoroughly liquidated. Timid holders are being strengthened by the favorable turn in prices, and the offerings from these will be lessened on any further advance.

ENQUIRIES ON INCREASE.

Better Demand Comes into Evidence for the Cobalt Shares.

James A. McIlvain in his weekly market letter re Cobalt says: The market for Cobalt stocks remains quiet, but exceedingly firm, with enquiries increasing daily, due to a desire to avoid interest and settlement. We are also told to note that the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month. There are many cars of stock knocking about which will be great bargains as Cobalt property, and the Hudson Bay Company are installing a 15-drill compressor, which, it is anticipated, will increase this company's shipments of five cars of ore a month.

STRIKE GOES ON.

At a special meeting of the Cobalt Miners' Union it was decided to continue the strike.

Loring Resigns.

Frank Loring has resigned as consulting engineer of the Tretway mine.

Hastings County Mines.

Mr. E. T. Corliss, inspector of mines, reports that work is being actively advanced on the properties of the Mineral Range Iron Mining Company, near Bancroft, Hastings County. A spur line of about three and four miles in length has been built from the Central Ontario Railway to the properties, and about 100 tons of ore are being shipped daily to the smelters at Midland, Ont., and Radnor, Que. The ore is magnetic, and there are considerable bodies of it.
