

December,

is no difference is zygote cau quality and in the larv. breeding B. Ripple Cou large numb have been were kept hatched, and coloring of of two types diate (see F worker was a considerab but some pro all intermedi.

It was evi produced all by a pure go confirmed by golden famili (1) from the at the end of of the drones had been kille drones in Ripled, and (2) fro place in cool therefore, close

There was a the opinion tha of all intermed the union of pure black dron not very numer took place in R out of five qu nearly two mile produced all i about nine inter

Among the fa both goldens and it is reasonable result of matin drones, the two t ing proportions. was about seven mediate, perhaps
