

Winter Butter.

A customer who uses **Herbageum** for his milch cows informs me that if at any time he quits feeding **Herbageum** for a few days his wife draws his attention to the fact that there is a decrease in the quantity of milk and that it is of poorer quality. For hogs we find it profitable and assure our customers that if they will feed it regularly to their pigs they will be free from worms—one great trouble with hogs—and that will do better in every respect.
Camden, Ont., Aug. 16, 1892. JACOB M. MOYER.

Last spring, I began feeding my cow **Herbageum** with the result of an increase in quantity and an improvement in the quality of the milk. The butter increased about one-third. I find it improves the color and flavor of the butter, the difference being as great as there ordinarily is between that from an Ayrshire and that from a Jersey. I feed it when on the grass as well as when stabled.
DANIEL P. McDONALD.
Westville, N.S., Sept. 8, 1893.

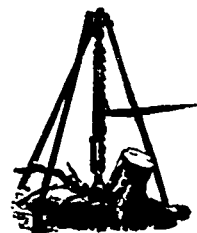

By using **Herbageum** for our milch cows in winter, butter can be brought in just about one-third of the time, besides which the butter is a better color.
WADLEIGH & McMANUS.
French Village, P.Q., May 25, 1889.

I find that when I feed **Herbageum** to my milch cows during the winter that the cream separates better from the milk, and the butter separates more quickly from the cream, and I can churn in at least one-third of the time.
MRS. MICHAEL FITZPATRICK.
Osceola, Ont., May 30, 1892.

During the autumn of 1891, when the pasture became dry and hard, Mr. Pynn, hotelkeeper here, began feeding his cow half a gallon of chop daily, which he continued all winter. After she was stabled a couple of weeks he decided to use **Herbageum** during the winter, and within two weeks of commencing its use, there was a daily increase of two quarts of milk, which was continued to calving time, in March, and at a cost of only eight cents per week.
Minden, Ont., Aug. 31, 1892. F. R. CURRY.

Some of my customers who fed **Herbageum** to their cows claim that it makes winter butter more like that made on the grass.
JAMES MILLER.
Ulverton, P. Q., May 28, 1889.

SOLE MANUFACTURERS
THE BEAVER MFG. CO.
GALT, Ont.

HAY PRESS "LA CANADIENNE"

Patent, June 1891 and November 1894.

The only one which works on unlevel ground.

The only one which you can fix without taking off the front wheels.

The HAY PRESS "LA CANADIENNE" is provided with a alarm bell and we are the only persons who have obtained a Patent for this new invention. The Fuller goes 33 inches which is 9 inches more than any other press.

This year, we have made a new capstan which gives much more lightness to the press. We have also a new Folder which permits to make the work without breaking the hay; and folds in uniform manner. See our New Press before making your purchase. The whole mechanism is in malleable cast-iron and steel, which gives more lightness and strength than any on the market. Write for prices, catalogue sent gratis.

We also manufacture the Corn-mill Vibrator for one and two horses, also Spring Harrows of the different kinds. Agents wanted everywhere.
