

November 5, 1930.

Dr. T. B. Macaulay, President,  
The Sun Life Assurance Company,  
Montreal, P. Q.

With further reference to the grant made us by the Sun Life Assurance Company, I am very happy to inform you that Professor Rhea will be our choice to go for six weeks' study at Sir James Purvis Stewart's laboratory in London. Professor Rhea, who is Associate Professor of Pathology, cannot be released before the end of the session, but this means that he will leave immediately after the end of March.

May I thank you again for making it possible for Dr. Rhea to have the opportunity of studying Sir James Stewart's method in the treatment of insular sclerosis. I am quite sure it will be a most valuable addition to the knowledge we already have in Canada on this subject.

Ever yours faithfully,

Principal.
