

A TABLE  
FOR FORETELLING THE WEATHER, THROUGH ALL THE LUNATIONS OF  
EACH YEAR, FOREVER.  
(Formed by Dr. Herschell, and revised by Dr. Adam Clarke.)

This Table and the accompanying remarks are the result of many years' actual observation; the whole being constructed on a due consideration of the attraction of the sun and moon, in their several positions respecting the earth, and will, by simple inspection show the kind of weather will most probably follow the entrance of the sun into any of its quarters, and that's near the truth as it be, or never found to fall short.

	IN SUMMER.	IN WINTER.
new moon, first quarter, full moon, or last quarter happens between midnight and 2 in the morning, -	Fair.	Hard frost, unless the wind is S. or W.
- 2 and 4, morning, -	Cold & freq. showers.	Snowy or stormy.
- 4 and 6, " "	Rain.	Rain,
- 6 and 8, " "	Wind and rain.	Stormy.
- 8 and 10, " "	Changeable.	Cold rain, if wind w.
- 10 and 12, " "	Frequent showers.	Snow, if E.
- 12, noon, & 2, p. m.	Very rainy.	Cold and high wind.
- 2 and 4, evening, -	Changeable.	Snow or rain.
- 4 and 6, " "	Fair.	Fair and mild.
- 6 and 8, " "	{ Fair, if wind nw.	{ Fair and frosty, if wind N. or NE; rain or snow, if s. or sw.
- 8 and 10, " "	{ Rainy, if s. or sw.	{ Ditto.
- 10 and midnight, -	Fair.	Fair and frosty.

Observations.—1. The nearer the time of the moon's change, first quarter, full and last quarter are to *midnight*, the fairer will the weather be during the seven days following. The space for this calculation occupies from ten at night till two next morning.

2.—The nearer to *mid day* or *noon* the phases of the moon happen, the more foul or wet weather may be expected during the next seven days. The space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to the summer, though they affect spring and autumn nearly in the same ratio.

3.—The moon's change, first quarter, full and last quarter, happening during six of the afternoon hours, that is, from four to ten, may be followed by fair weather; but this is mostly dependent on the wind, as is noted in the table.

4.—Though the weather, from a variety of irregular causes, is more uncertain in the latter part of autumn, the whole of winter, and the beginning of spring, yet, in the main, the above observations will apply to these periods also.

— Such and the like observations, especially in those cases where the observer would be within sight of a good vane, &c. &c., cardinal points of the Heavens are correctly placed.
