The Company have acquired, by purchase, three leases from Government of Nova Socia to Hon Alex, Macfarlane, of one square mile each, of the richest coal deposits in Canada, at Spring Hill, Cumberland County, Nova Scotia, renewable until August, 1926 Royalty 10 cents per ton of 2.240 fbs. The seams and upwards, of varying thickness from 24 to 13 feet, are known to ex-fix within these areas, which comprehend (exclusive of a portion of the General Mining Association reserve) nearly all the coal yet discovered in this well known di trict. Of these, one, known as the 11 leet seam, has been opened, and several bundred tons raised by a slope sunk only 25 feet from the surface, and has been proved by test pits about 14 mile at an average of 10 feet from the surface, and preserving a thickness of 10 feet for two thirds of that distance. The slope has lately been carried down to the depth of 25 feet, exhibiting a marked improvement in the quality of the coal, described by Sir Wm. Logan, from specimens near the outcrop, as " an excellent coal, superior to any of this continent yet known." A moderate estimate of the quality of the lease. The larger seam has been exposed by a trial pt within the areas; the smallest of 23 feet, is be-lieved to contain a v-luable gas cual, and it is a fair geological inference that all these beds of coal will be found in their proper position. Thus several distinct colleries may be conditioned by a trial pt within the areas is the smallest of 23 feet, is be-lieved to contain a v-luable gas cual, and it is a fair geological inference that all these beds of coal will be found in their proper position. Thus several distinct colleries may be beened to individuals or cumpanies. 125 Puns. Choice Cienfuegos MOLASSES. At No. 23 Prince William Street. TOBACCO. bedes of coal will be found in their proper position. Thus several distinct collectes may be leased to individuals or companies. A branch railway of 34 miles has been surveyed, and steps are being taken for its construction to connect the property by a down grade with the Intercolonial Railway, at a point 21 miles from the head of the Bay Fundy and contemplated Bay Verte Canal, and 13 miles from a shipping place at the mouth of Maccan River, half a mile from the Intercolonial, where vessels drawing 13 leet of water may load. Until the opening of the Intercolonial, between Truro and Amberst, next autumn, the coal will be hauled 4 miles to Black River Station.

the Intercolonial, between Truro and Amberst, next astumn, the coal will be hanled 4 miles to Black River Station. From the nearness of the outcrop to the surface, and the seams lying on high and descending ground, securing easy drainage, it is considered that these seams may be most economically worked. The freight of a ton from the head of Bay Fundy to Boston or New York is about 75 cents le-a than from Picton or Sydney—of itself a good profit, while the difference to St. John is full \$1 00. The Spring Hill coal is well adapted for house, steam and smelting purposes. Situ-ated within 37 miles by rail of the lodes of brown hematite and micaceous iron ore of the richest quality, known as the Acadia iron ore, of Londouderry, it is difficult to as-sign limits to the quantity of ore likely to be taken to Spring Hill, for smelting by a coal unusually tree from sulptur. The large proportion of carbon renders it eminent-ly adapted for manufacturing coke, which, with the coal itself, must be extensively used in the iron and steel works at Londouderry, as well as the Machine shops being erected for the Government railways at Moneton. The purtion of the Intercolonial between Truro and Amherst is now being ballasted with engines driven by Spring Hill coal. It is understood that the line between Truro and Newcastle, if not the whole line to St. John, a distance of 280, miles will shortly be worked in the same way, and the local demand between these points, already large, is steadily increasing.

is steadily increasing. Vessels bringing flour from the St Lawrence to St. John, Yarmouth, and other lower ports, through the Bay Vorte Canal, when completed, may have return cargoes of coal to Quebec, Montreal or Toronto. From all these sources of traffic, in addition to the Western part of Nova Scotia, the New England ports and New York, it is assumed that an unlimited market will be afforded.

afforded. Additional means of shipment will be afforded by the contemplated railway to Parrshoro-a port open at least ten to eleven months in the year-for which the Nova Scotia Legislature have provided large subventions. The estimated cost per ton for ruising, haudling, and putting on board ship, say at mouth of Maccan river, is about as follows:

If Picton and Sydney coal can be shipped to Boston and New York at paying prices. it cannot fail to be highly remunerative to send a better article from Spring Hill, with an advantage of 75 cents in freight. The local traffic would yield a high rate of

Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, &c., and assuming orly 100 000 tons as the annual production at first, we have a gain of 20 per cent. on the capital, which might be much augmented by the rent of other seams, as suggested. From the exceptionally high character of this coal, and the facilities for raising it cheaply, this quantity, it is confidently believed, might ere long be doubled or treblet, and a lain to of profit secured even with considerable increase of capital.

## TESTIMONIALS,

Extracts from Reports of Messrs. Woodhouse and Jeffcock, Mining Engineers, London and Derby, G. B., (January 2, 1866)

The Coal Field which we have carefully examined, and which is the subject of this Report, is situate in the county of Cumberland, in the province of Nova Scotia. It is generally de-cribed as the "Springhul 'Coal Field, but in reality it is a part of the great Cumberland Coal Field. The first or upper seam we found to be a bed of remarkably good ocal, presenting a very
