

15. *Rosewood*.—African.

This is a tropical tree and consequently all the Rosewood used is imported. The above variety which grows in Africa is the true Rosewood but in the tropics almost any dark colored wood is known as Rosewood. About the only place where this wood is used is for stop nob.

16. *Mahogany*.—

Is used for the jams (facing around stops) on console; for the envelope of case of console, fronting and sometimes the entire organ case is constructed of this beautiful but costly wood.

Of the sixteen different kinds of wood above mentioned as being used in organ building it may be of interest to note that thirteen are indigenous to Canada.

The Prosperity of Canada rests its weight upon tree trunks.

Kick out the Forest Prop and no Canadian industry can long survive. The security of the forest means the security of employment, the security of factory production, the security of farming, mining, fisheries, lumbering and the vast industry of pulp and paper. The Forest is the Mother of Civilization.

Tree Seeds for Great Britain.

In response to requests from forestry authorities in the United Kingdom tree seeds were collected in British Columbia by officers of the Dominion Forestry Branch. These were forwarded to the Forestry Commissioners for Great Bri-

tain to be used in the carrying out of reforestation plans under way in the United Kingdom. The seeds included those of Douglas fir, Sitka spruce, alpine fir, and of other species which the British authorities desire to test.—Annual Report, Director of Forestry, Ottawa.
