

# A Handbook of Antiseptics

By HENRY DRYSDALE DAKIN, D.Sc., F.I.C., F.R.S.

AND

EDWARD KELLOGG DUNHAM, M.D.

Emeritus Professor of Pathology, University and Bellevue Hospital Medical College; Major, Medical Officers' Reserve Corps, U. S. Army

12mo, \$1.25

The object of this handbook is to present a concise account of the chief chemical antiseptics which have been found useful for surgical purposes during the present war. The unparalleled severity and frequency of wound infection found there has led to considerable advances in our knowledge of these antiseptics, and of methods for their successful employment as found in Dr. Dakin's recent broad experience on the various European war fronts.

The current European practice is here, for the first time, collected into concrete condensed form. The book contains results of much of the investigation carried out under the direction of the British Medical Research Committee.

It also presents, *for the first time*, unique methods of using certain disinfectants for the sterilization of drinking water and the disinfection of hospital ships, together with simple apparatus invented by Dr. Dakin and *successfully used by him under actual war conditions* with the French and British Army Medical Services.
