**FLOWER INDUSTRY ON THE
RIVIERA.**

From a report, full of interesting information on the Riviera flower industry, issued by M. Aussel, secretary of the French Floral Industry League, it would appear that the value of the flowers annually dispatched from the French Riviera is no less than \$12,028,820 and will this year exceed \$12,200,000. The average number of boxes of flowers dispatched from the various French Riviera stations between November and May in each year is 2,000,000. As the average value of each box is 16 francs (\$3.09), the total commercial value of the flowers sold from the French Riviera every year is \$6,200,000. From the Italian side no less than 1,000,000 boxes were dispatched in 1913, the commercial value of which was \$5,800,000.

SKATING ON SALT.

Nature has been conquered once more. Men can skate, not on ice, but on salt. A salt-skating rink, constructed by the patented process of Dr. Ed. Arnold, was recently exhibited and operated in Berlin.

All skaters will welcome the invention of a method of producing, by purely chemical means and without the employment of a costly refrigerating process, a saline crystalline mass which exhibits all the characteristic properties of ice. The surface of the mass can scarcely be distinguished from a surface of natural or artificial ice, and the resemblance is increased by the fact that the shavings produced by the skates have all the appearance of snow. The mass is entirely odorless and contains no ingredient injurious to the health or the clothing of the skaters. It can be utilized for skating, with ordinary ice-skates, in every season and climate, except when the temperature is higher than 86 deg. Fahr.

The mass can be applied to any tight floor of wood, cement, or asphalt, from which it can easily be removed by chipping or steaming.

BOARDS MADE FROM STRAW.

Artificial wood, having the resistance of oak, is now successfully made from straw. The straw, after being cut into small pieces, is reduced to a paste by boiling, to which certain chemicals are added. When the paste has been reduced to a smooth mass it is put into presses, and planks, beams, laths and mouldings of all sizes are readily made. This new material can be sawed like natural wood. As a fuel it emits a bright flame and little smoke.
