ALL THE FISH FACE FOR Mustad's Hooks.

They are the right shape and best quality.

If You Can Afford to use the BEST buy Robin Hood Flour

"The Flour that is different." If you do you will find that the cost of ROBIN HOOD is smallest after all. The bigger loaf is one difference. Easier assimilations of the bread is another difference. The sweeter flavor is a third difference. There are other points of difference. Any one of them worth the extra cost.

BOVRIL.

Report of the Feeding Experiments Made in the School of Physiology, Trinity College, Dublin—

The preliminary announcement of the results of the experiments conducted at the request of the Local Government Board for Ireland during the past year, in the School of Physiology, Trinity College, Dublin, as to the nutritive value of Bovril, and communicated to the British Association at Sheffield ("Times" report, September 3), has created considerable interest amongst the Medical Profession.

In order to secure a decisive test, dogs were first brought to a constant weight on dried dog biscuit mixed with known quantities of water. Bovril—from 2 1/2 to 7 1/2 grammes—was then added to the food, with the result that the weight of the animals went up as much as 50 to 100 grammes, or, in round numbers, 10 to 20 times the weight of the Bovril given. Afterwards Bovril was discontinued, and the animals fell back to the original weight. Compared with the effect of hard-boiled white of egg it was found that from 8 to 10 times as much by weight of the latter had to be given to obtain the same increase in weight, or, taking the dried organic solids in the two foods, from 2 1/2 to 4 times as much egg white had to be given to obtain the Bovril effect.

In several of the experiments there was a retention of reserve nitrogen, and in all an increased utilisation of other foods.

It was therefore concluded that Bovril had both a direct and an indirect nutritive value, the latter by causing a more complete digestion and absorption of the other food given.
