

TRANSFERS.

Mobile--1¼ miles N. of Harper's Camp, A. Wallace, J. McCabe and L. Ausfin; August 24.

Gold Bug--G. D. Harrison, and G. J. Rodgers, to O. S. Batchelor.

Treadwell Mining Coy. ¼ to O. S. Batchelor.

Skookum Pup--John Fleet to H. Ashby.

Truth, Hope, Jennie, Dakota--J. McGee, option to H. Ashby.

Hecla--W. H. Fowler, ⅓ interest to J. P. Dillon.

Hecla Fraction--J. P. Dillon to H. L. Matthews.

Liberatus--J. Delaney to E. Powers.

Rose and Last Rose of Summer--J. P. Dillon to O. S. Batchelor.

Providence--R. Caverly to C. E. McKenzie.

Baena Vista and Golden Pearl--T. Legacey to T. Ahearn.

The samples already sent to Paris are copper-gold ores from the Pothook; Python, Golden Star, Evening Star, Delaney fraction, Iron Mask, Lucky Strike, Truth Group, Wheel Tamar, OK Group, Gold from the Grass Roots and Chieftain and iron ores from the Glen Iron and Pothook mines. Gold quartz from the Noonday and Gordon groups, the Hardy Mountain group, copper and silver, Princess; molybdenite, Grande Prairie; coal from Sarel and Young property, on the North Thompson; silver lead from Manson Creek; pyrrhotite from the Blue bird, Shuswap.

The Kimberly group is being worked steadily at the tunnel, some ore is showing on the face.

Lytton is quiet at present, but within a month or six weeks a dredge employing about 20 men will be working on the river. The road into Lillooet will also be finished in about a month which will make things better for both towns.

The Mountain View was visited during the week and it was noticeable how well the property is showing up with the work done. Instead of wasting time and money on sinking shafts, going nowhere in particular, a series of deep cross-cuts have been made, which will enable the property to be easily examined. The surface showings are very fine and extensive. Good specimens of copper stained rock and copper pyrites are to be seen near the surface. Another feature is the presence of copper pyrites in magnetite.

Mr. Donald Simpson has made a fine discovery up Cherry Creek, about 12 miles south of Mr. Haghes. The vein stuff is quartz, carrying gold values. The country rock is dioritic schist, the vein is beautifully formed. Mr. Simpson has taken out a man with him to help develop his claim.

One of the most promising groups in the camp, though it has seldom had the public attention drawn to it, is the Truth Group, which lies between the Cherry Creek road and the Pothook. For some time past, a good deal of careful development work has been done, with most gratifying results, a large amount of surface cross-cutting has shown
