Market Situation and Outlook

- Japanese imports of herrings are roughly grouped into two categories. One category is roe herring which consists of Pacific herring imported from the United States, Korea and Russia and Atlantic herring imported from Britain, Holland and Ireland. The other category is red-feed herring imported from the United States, Canada, Iceland, Norway, Russia and other European countries.
 - Roe herring is imported mainly for the extraction of roes and the carcasses are used for <u>migaki-nishin</u> (dried hard fillets) and fish meals. Imports of roe herring from the United States were the highest ever in 1992 due to abundant landings in
