

The
STEAM TENSION
BAND MILL
For Single and Double Cutting

Has the simplest and most sensitive straining device, and because the tension of the saw is always just right, this mill cuts better lumber than any other.

When changing saws no time is lost raising and lowering top wheel, and taking off and putting on strain on the saw, as in other mills.

All the adjusting mechanism is out of the way of lumber, and removed from sawdust and dirt.

It is being installed in all the largest and fastest cutting mills in the country.

It will pay you to investigate this mill.

We have an interesting booklet telling all about it. Write for a copy.
