Backed by the Facts. Compliments thick and fast come to this store from the thousands of visitors who touch Toronto during the summer months. You see them looking up and admiring the magnificence of the store. Their admiration heightens as they stroll through its seven floors and see for themselves the substantial and artistic character of the building in every detail. It means something that 3,000,000 pounds of steel were used in the construction of this store, and that it is built on foundation columns that extend 17 feet below the sidewalk, set in great beds of concrete 113 feet square, surrounded by pyramids, each column capable of carrying a load of 800,000 pounds. But the store not alone appeals to your best taste, but it touches your pocket in a peculiar fashion through the scores of bargains to be found in every department. This comes with its great buying powers and unsurpassed outlet for disposing of stocks.
