DE LAVAL CREAM SEPARATORS

Are in a Class By Themselves

They cost but a little more than the cheapest, while they
save twice as much and last five
times as long as other separators.

They save their cost every six
months over gravity setting sys-
tems and every year over other
separators, while they may be
bought for cash or on such liberal
terms that they will actually pay
for themselves.

Every assertion thus briefly
made, is subject to demonstrative
proof to your own satisfaction by
the nearest DE LAVAL local
agent, or by your writing to the
Company direct.

Why then, in the name of
simple common sense, should any-
one who has use for a Cream

Separator go without one, buy other than a DE LAVAL, or
continue the use of an inferior separator?

De Laval Dairy Supply Co., Ltd.

An Unsolicited Testimonial

A CLEAR-EYED young farmer stepped up to a
manure spreader demonstrator at the 1912 Chicago
Live Stock Exposition and, pointing to one of the
spreaders in the exhibit said:

"I own one of those machines. It is the strongest spreader I ever
had on my farm, and I've had a number of different machines. I
honestly believe that if I filled that spreader with soft coal it would
spread the stuff for me. I wouldn't trade it for any spreader I ever
owned or saw."

This unsolicited recommendation from a man who had used an
I H C spreader, and therefore knew what it would do, carried weight
with his hearers. They might have doubted whether an I H C
manure spreader would spread soft coal—but there was no doubt in
their minds that an I H C spreader had spread manure to this man's
entire satisfaction. This is a typical case showing what users think about

I H C Manure Spreaders Corn King and Cloverleaf

I H C manure spreaders are made in many sizes, running from
small, narrow machines for orchard and vineyard spreading to
machines of capacity for large farms. They are made with either
endless or reverse aprons as you prefer.

The rear axle is placed well under the box, where it carries over 70
per cent of the load, insuring plenty of tractive power at all times.
Beaters are of large diameter to prevent winding. The teeth that cut
and pulverize the manure are square and chisel pointed. The apron
drive controls the load, insuring even spreading whether the machine
is working up or down hill, or on the level. I H C spreaders have a
rear axle differential, enabling them to spread evenly when turning
corners.

The local agents handling these machines will show you all their
good points, and will help you decide on the one that will do
your work best. Get literature and full information from them,
or, write the nearest branch house.

MAPLE EVAPORATORS

TO the live farmer, our Perfect
Maple Evaporator and a sugar
bush can be made to produce a revenue
when it is most needed.

With our Maple Evaporator sap is easily and
economically converted into the finest quality
maple syrup. The body of the
Perfect Evapora-
tor is made of
heavy sheet steel,
thoroughly riveted
and braced with
steel angles and fit-
ted with cast-iron
door and frame.
The working of the
Evaporator is very
simple—put the sap
in at one end, and
it comes out syrup
at the other.

Send for illustrated catalogue.
