Larger Sums in Proportion.
This is a good opportunity for those who have money to invest it to advantage.
DELANEY & BYRNE.
Queen Street, next to Hon. D. Brennan's,
Charlottetown, Aug. 1, 1866. 1p c s p

Miscellaneous and General News.
TAKING THE NINETEENTH CENTURY DOWN A PEG.

The Rev. Hugh Stowell Brown, of Liverpool, gave a lecture in Dundee last month on "The Good Old Times." We extract the following passages:—"Men did as wonderful intellectual feats 2,000 and 3,000 years ago as are done in the present time. If it be true that man was only an improved gorilla, we don't find that he allowed a greater resemblance to it than that now—for his own part, he believed that he was more monkey now than then, and possibly the gorilla might not be much removed from the race from which we sprang as the gorilla is from the monkey. Abraham believed to be a thorough-bred gentleman as any in the nineteenth century—Jacob as good a man of business as they would find on the Liverpool Exchange; while Joseph was a statesman and Moses a legislator, worth a great deal more in their time than all our Lords, Commons, and Town Councils put together. In our own country in the 16th and 17th centuries, there were hundreds of men who, for brains and the use of them, would stand comparison with any that adorned this century. We had some splendid remains of architecture in this country, and we vainly attempted to equal the edifices of which they are the ruins. The very best we have are only bits taken from edifices erected hundreds of years ago. Our mechanical appliances for building are far superior to what would have been known to the people of the older times, but they reared up buildings that are the just astonishment of the civilized world, and which we cannot equal. We may copy them, but we may copy a painting of an old man, but till we strike out something of our own as good as the Parthenon or Strasbourg Cathedral, we must knock down to the old times. We think we do all things on a grand scale, and a Cockney will boast that the largest theatre in London will hold 1,000 people; 30,000 would scarcely have filled the Coliseum of Rome. St. George's Hall, Liverpool, is justly regarded as a very magnificent building, but it was only a reproduction of a very little bit of the Baths of Diocletian, which were nearly a quarter of a mile square, the whole structure being a very great deal larger than our Houses of Parliament. Some moderns said if the people of ancient times could revisit the earth, they would be very much astonished. He had no doubt they would, but he would be sorry if they did so, they should only laugh at us. Possibly our great-grandchildren, when they visit all centres of the 18th—would be astonished, but not the men of 2,000 years ago. We thought we had made great progress in sanitary science, but he believed that the Romans had a better system of drainage than we have now. In Rome alone there were 300 public baths, and it never had more than one-half the population of London. They had hot, cold, and warm baths, and the people of the old Turkish bath, and what was better still, the people constantly used them. We boasted of our civil engineering, but it was questionable if it had advanced much since the time when the Romans built their aqueducts, which were carried over valleys, supported on thousands of arches, or tunnelled for miles through the solid rock, while the greatest engineers of the present day give the supply a proper grade. There was a great deal of talk about that wonderful triumph of genius, bringing the water of Loch Katrine to Glasgow, but the quantity of water delivered to every inhabitant of Rome was ten times the water supply of London. An abundant supply of water was a special characteristic of ancient times. We boasted of the inhabitants of a besieged city suffering from hunger, but rarely, if ever, from thirst. And there was no overworking. Nineveh contained 1,000,000 inhabitants, and the population of London five times as dense as that of Nineveh. The ancients did not allow the dead to be buried within the walls of their cities—a practice only beginning to be abolished since the time when the Romans built their aqueducts, which were carried over valleys, supported on thousands of arches, or tunnelled for miles through the solid rock, while the greatest engineers of the present day give the supply a proper grade. And there was no overworking. Nineveh contained 1,000,000 inhabitants, and the population of London five times as dense as that of Nineveh. The ancients did not allow the dead to be buried within the walls of their cities—a practice only beginning to be abolished since the time when the Romans built their aqueducts, which were carried over valleys, supported on thousands of arches, or tunnelled for miles through the solid rock, while the greatest engineers of the present day give the supply a proper grade. There was a great deal of talk about that wonderful triumph of genius, bringing the water of Loch Katrine to Glasgow, but the quantity of water delivered to every inhabitant of Rome was ten times the water supply of London. An abundant supply of water was a special characteristic of ancient times. We boasted of the inhabitants of a besieged city suffering from hunger, but rarely, if ever, from thirst. And there was no overworking. Nineveh contained 1,000,000 inhabitants, and the population of London five times as dense as that of Nineveh.
