

## THE SUMMER SCHOOL OF SCIENCE.

### Session of 1899.

The Summer School of Science for the Atlantic Provinces of Canada, will be held this year at Campbellton, on the far-famed Restigouche River. The occasion will be one of more than ordinary interest. The Nova Scotia Institute of Science, the Natural History Society of New Brunswick, and other scientific societies, have been invited, and have consented to participate in the gathering, which, it is confidently expected, will be one

in Quebec and north-western New Brunswick. To the south, just back of the town, is Sugar Loaf Mountain, from the top of which one of the most commanding views in northern New Brunswick may be obtained. No more advantageous place could possibly be chosen. The scenery is such as to delight every lover of nature; and to spend two weeks amid such scenes and in a cool and invigorating atmosphere will refresh and delight many tired spirits. The student of natural science will here find unequalled opportunities for investigation. Geologists and botanists will have before them one of the most interesting districts in Canada for exploration. The zoologist will have abundance of marine and fresh

of the most representative in science ever assembled in these provinces.

#### The Location.

There is no more romantic and picturesque river in the Atlantic Provinces than the Restigouche, and the choice of Campbellton for the Summer School Session of 1899 is a happy one. The scenery in the vicinity is magnificent. To the north and west are the lofty hills of Quebec and northern New Brunswick. To the east is the Baie de Chaleur, towards which flows the cool waters of the Restigouche from their mountain sources

water forms within easy reach, while the historical student will find himself on ground famous in early history, for here was fought the final battle between the English and French in Canada.

Campbellton is not only picturesquely situated. It is an important railway centre and commercial port. Situated on the estuary of the Restigouche, its waters are navigable for the largest ocean steamships. The citizens are noted for their public spirit and hospitality. The fine school building recently opened and containing eight large classrooms, and an assembly hall capable of
