SINN FEINER ARRESTED
FOR INCENDIARY SPEECH

Sum Fein member of parliament for West Meath, was arrested today on charges made in connection with a speech delivered at Athlone.

Ginnell has had a stormy career.
Until 1918 he sat in parliament as in Irish Nationalist, and when he retired was said to hold the record for asking questions. In 1918 he served six months in prison in connection with some disturbances in Ireland.
Ginnell is the author of the statement on the Irish question, which members of the Sinn Fein have been endeavoring to present to the peace conference.

WEST TREE VEINS MANY AND STRONG

Unusual Amount of Visible Gold is Shown on Promising Property.

The Lake Shore is now mining the highest grade ore in Ontario under the waters of Kirkland Lake. The big vein on the West Tree mine at Shining Tree also shows strong on both sides of Caswell Lake, an expansion of the Montreal River, here about 350 feet wide. This vein carries ankerite or ferro-dolomite similar to the veins on the Hollinger Consolidated. The vein can be traced for 600 feet from the east side of the lake and for over 1,100 feet on the west side, where it 1,100 feet on the west side, where it is a full 25 feet in width with several Bid.

WHITMAN'S REPORT **AROUSES INTEREST**

Geologist of Highest Reputation Considers West Shining Tree Promising Field.

Alfred R. Whitman, whose favorable report on West Shining Tree has aroused so much interest, is an economic geologist of the highest standing. He is a graduate of Columbia University and is wel lacquainted with the mineral-bearing rocks of northern Ontario He practiced in Porcupine and Cobalt before removing to New York. His work on the McIntyre-Porcupine solved the various problems of faulting which at one time threatened the very existence of the company. Since Whitman's work the McIntyre has been a decided success.

Many people are not aware of the difference between exploration and mining. Exploration is concerned with the location of ore bodies. It is the function of the exploring engineer. The mining engineer is very often unsuccessful in exploration. Indeed it is considered that the greater part of the losses in the mining industry arise from faulty exploration. An extensive knowledge of economic geology and ore deposits is indispensable to the exploring engineer. This the mining ensineer may not possess. Mr. Whitman's specialty is ore deposits, the exploring engineer. This the minfit, 550 and their nature and modes of occurrence.

His opinion on Shining Tree is therefore entitled to great weight. Another economic geologist from the
United States is now on the way to
Shining Tree. He is also a man of
international reputation.

> NEW VEIN ON KEORA GIVES GOOD PROMISE

Vickery and Co., in their weekly market letter say: Keora within the past day or two, has exhibited a better tone than might have been expected under the circumstances. There are signs now of restiveness in the active issues, and we will be greatly mistaken if a strong bull movement is not in full swing within the next few days.

is not in full swing within the next few days.

Keora, by reason of its developments, should naturally be in line for materially higher prices. We believe that the present market valuation of the company is by no means commensurate with is instrinsic worth, especially in the light of the recent announcement of the cutting of the No. 6 vein, which promises to be at worthy rival of the huge No. 5 vein. Diamond drilling of the Keora formations is continuing with unabated energy, and further spectacular results are expected to occur at any time.

THE TREASURY SHARES OF THE BALDWIN GOLD MINE

Offer a very exceptional opportunity for large profits. The \$5.00 shares of the Hollinger Consolidated were sold in 1912 at \$3.50 each. By January 1st, 1916, \$7.15 had been paid in dividends on each share and the equivalent of these shares has now a value of \$35.00. The low initial price of Hollinger shares was due to the fact that during the development peried it is difficult to say what shares are worth. That is just the position of the Baldwin now. We are developing vigorously and we have a splendid property. But we have no specific tonnage blocked out, though we are nearing this condition. The shares are very cheap because we cannot accurately determine the real value of the property. We are in the same position as the Hollinger was in 1912. When production begins there will be a tremendous advance. Though there is little risk now, there is some uncertainty, which keeps the price down. But this is the time for very big profits. You know that the Baldwin is a great property, that it is being honestly and efficiently developed and that every effort has been made to eliminate risk. Buy the shares before production begins.
