ACCURACY FIRST

Boring a Hole a mile deep in South Africa with a Sullivan Diamond Drill

If prospecting is to be of any value to you, it must be accurate.

Is the ore there?

Is it worth mining?

How can it be mined cheapest?

You must have accurate, reliable answers to these questions before you invest capital or spend money for development.

For more than 40 years, mining men all over the world have secured answers of this kind to these questions by using

Sullivan Diamond Core Drills

The cores recovered by Sullivan Diamond Drills form a definite, exact, permanent record of all mineral strata penetrated. They may be removed at any angle and from depths up to 7000 feet.
