whole country.

The graceful and spectacular work of the few metropolitan divers upon this occasion, chief among whom were Thos. O'Callaghan, Walter Lee and Fred Wenck, caught the fancy of the spectators, and diving was an established feature upon each programment. ture upon each programme of swimming events thereafter. A little later the interest created by the sport coming to the notice of the officials of the Amateur Athletic Union the latter added a national championship at the sport, which has been one of the most interest-ing features of the national swimming

championships.

Later still the colleges took up diving and made it one of the principal features of the programmes of their dual awimming meets when the intercollegiate awimming association was organized. Then they created an intercollegiate div-ing championship.

Rules were then adopted by the A. A.

Rules were then adopted by the A. A. U. to govern diving contests, defining the standard dives, and now this branch of sport is as firmly established as if it had been followed for years.

The regulation dives altogether number five—the plain front, the plain back, the front jackknife, the back jackknife and the one and a half dive. The takeoffs, which are from a solid platform, number three in all—ten, twenty and the diver gets credit thirty feet—and the diver gets credit for a greater number of points as the of the takeoff increases.

In the plain front dive the diver, with feet close together and hands held over head, must describe a long or short semicircle before entering the water, that detail being left optional. This is the easiest of all the dives and the first one

easiest of all the dives and the first one mastered by the beginner.

The front jackknife is executed by jumping a few feet in the air, turning sharply and descending so that the head shall enter the water not more than six feet beyond the edge of the platform from which the diver has jumped. This the cultical difficult dives a the contest. from which the diver has jumped. This is quite a difficult dive, as the contestant is very apt to make it a plain front dive instead of embodying the features of the jackknife, and thus leaves open a contest of the packknife, and thus leaves open a contest of the packknife. trap into which many good divers have fallen on the day of a diving contest.

In accomplishing the third regulation dive, the back jackknife, the contestant stands, feet close together, on the edge of the takeoff with his back to the waof the takeoff with his back to the water. Jumping upward his body turns quickly toward the point of takeoff and he descends with his face outward. As in the front jackknife, the regulations require that the diver's head shall not enter the water more than six feet be-yond a line drawn from the edge of the takeoff.

The last of the regulation dives, the one and a half, is the most difficult, and one and a half, is the most difficult, and few even of the most expert divers of ten succeed in performing it perfectly. This dive as a matter of tact is literally a somersault and a half. The body must describe a complete somersault in the air, and then continue half way around again, a that the contract to the section. again, so that the entrance to the water

is head first.

It is on this point that arises the difference between the diving experts of American and those of the continental American and those of the continental countries. Americans hold that the very essence of the dive rests upon a dean entrance, head first, with the least pos-sible disturbance of the water. It was on this part of the dive that so much discussion was created at the St. Louis World's Fair. Germany was represented by a team of splendid divers—from the continental point of view. In Germany points count for the diver's manner of approaching the takeoff, his form in pre-paring himself for the dive, his movenents in the air, and then criticism of

his actions ceases.

Magnificent work was shown by the Germans at the World's Fair contests in all these particulars—in fact, they com-pletely outclassed the efforts of the Araerican contestants. But the Germans did not care how they entered or struck the water. Walking down the plank of the springboard with head erect, eyes front, chest thrown out, feet close together, legs working like those of an automaton, hands rigidly held to the sides, the German diver with a spring of marvelous ease would describe a beauti ful evolution through the air and then hit the water broadside with a resound-ing smack that would send showers of

spray over every one near by. The American performers followed with a great deal less fuss and even with a great deal less fuss and even grace, jumped far out into the air and entered the water head first, at times with such skill as scarcely to cause a ripple. When the contest was decided the judges had no other alternative than to award the event to the American contestants.

testants. Every young swimmer now knows the regulation American dives sanctioned by the A. A. U., and these youngsters are becoming very efficient. While but five regulation dives are scheduled, still the rules in this country permit three spe-cial dives, so there need be no check up-

on originality.

However, it is the object to confine even these specialties to evolutions which shall invariably end with the en-trance head first to the water, although no attempt is made to hamper or restrict the movements of the diver in the

Diving rarely has bad results if a peron will exercise just ordinary caution Persons should make it a practice never to dive into unknown waters. Investi-gation of the nature and depth of the gation of the nature and depth of water should always be made before a dive is undertaken. There may be less water than one supposes; a broken spile may be concealed by the water, or a heavy piece of waterlogged wood may be floating a few feet below the surface. New York Sun.

Up to Date.

COW TESTING ASSOCIATIONS

Branca of the Dairy and Cold Storage Commissioner, Dominion Department of Agriculture.

At Ste. Emelie, Que., in June, 142 cows gave an average yield of 546 pounds of milk, 3.8 test, 20.8 pounds fat. The best herd average was 631 pounds milk, 3.8 test, 24.3 pounds fat. The highest yield of any one cow was 1,030 pounds of milk testing 3.50. The poorest herd was one of 13 cows that averaged only 392 pounds of milk and 16 pounds of fat. If the 13 cows in this herd had given only spouly milk average to pring given only enough milk extra to bring them up to the average yield of all the 142 cows in the association, they would have given enough milk in the month to make an extra 182 pounds of cheese worth \$20. That would not be much

worth \$20. That would not be much improvement to ask just to bring them up to the average, not the best herd; and if the cows are such that they cannot be made to yield an average quantity, should they be kept?

At Warsaw, Ont., in June, 118 cows gave an average yield of 929 pounds of milk, 3.2 test, 29.9 pounds of fat. The best herd average was 1,042 pounds of milk, 32.3 pounds of fat from a herd of 26 cows. This association record is in rather sharp contrast to the one above, and indicates the great differences that and indicates the great differences that exist between the results obtained in different sections of the country. Stated in another form, if the Ste. Emelie cows were as good milkers as those at Warsaw, they would have given an extra weight of 54,340 pounds during the month.

C. F. W.

A True Man.

Aldrich's neat and telling wit has long, been a tradition, his haunting lyrics and delightful prose are bound together in his collected works for all men to read, but only one who has read his familiar letters can adequately know the fineness and soundness of his nature. He had his prejudices and prepossessions, but there were no "kinks" possessions, but there were no "kinks" in him. He was the soul of sincerity, a good lover, a good hater, a true man. In proportion as we become aware of this, we become aware of a new integrity and importance in his work; already so securely fixed in its place among the choice treasures of Amer-ican poetry.—August Century.

Always Something to Hope For. The Pessimist:

There's no use talkin', things are bad And gittin' worse from day to day.
Think of the April that we had, And now see what we get in May!

Why think of April, which is dead? Why contemplate May with a sigh? hink of the June that lies ahead, And if it turns out to be a disappoin

ment, you can still look forward to July.

FEAST OF THE GARLANDS. Queer Swiss Marriage Market-Pecu liar Ways Men and Women Seek Mat

The marriage market (or fair) which was held recently at Ecaussines in Belgium has many counterparts elsewhere.
In several of the more remote Swiss cantons, for example, there is held what is known as the feast of the garlands. The marriageable maidens assemble at sunset, sing, dance and make merry. Each wears a chaplet of filowers on he forehead and carries a nosegay tied bright colored ribbon in her hands.

If a lad is attracted by a maid he plucks a flower from her bunch. She pretends not to notice, but when the merrymaking breaks up at dawn she will if she reciprocates his feelings, tie the entire bouquet by the ribbon to the handle of the door of the cabin wherein he resides or alternatively fling it through the open casement of his bedchamber. famous Tunis marriage mart,

which so much has been written, is held twice a year, in the spring and the au-tumn. The Tunisian girls attend in their jewelry disposed about her person. The "golden girdle of maidenhood" encircles her waist, and in it is an unsheathed dagger. When this is gently removed by a passing gallant and presently returned it means that a proposal has been

A prettier custom prevails among the Ooraon maidens, who at stated inter-vals assemble in the market place. In front of each is a lighted lamp, emblem of conjugal fidelity. A young man feels attracted. He gently blows upon the flame, extinguishing it. The girl relights it; it is a rejection. If she leaves

alone the offer is acceptable. Even in England these curious markets are not unknown, although they are not openly acknowledged as such. One has been held on St. Martha's Hill, Surrey, on each recurring Good Friday dur-ing some centuries. And the statute and mop fairs that are still celebrated in various rural localities are marriage marts in all but name.—Pearson's Week-

Why Naval Uniforms Are Blue. Naval uniforms all the world over pretty well are navy blue, say the Pall Mall Gazette. The British fashion in this matter has been the rule with maritime people in general. That blue was ever selected for the king's avail service was a fortuitous happen. blue was ever selected for the king's naval service was a fortuitous happening. When, in 1747, the question of uniform was being considered the color selected had very like to have been French gray laced with silver. While the King was still not quite decided he saw the Duchess of Bedford in a riding habit of blue faced with white and enlivened with gold lace. It was a revelation. Here, the King declared, was the uniform for his sea service officers, and no more was heard of French gray. The navy took to blue, and every other navy has taken to it since.

Cheating the People. When the rates charged by municipal plants are too low to cover the cost of operation, maintenance and investment the deficiency must be made up by taxation, a part (and frequently a large part) of which falls on those who derive to benefit from the plant. Their money no benefit from the plant. Their money is taken from them arbitrarily to enable some of their fellow-citizens to get their electricity, gas or water below cost. This is manifestly unfair; but it is no more unfair than the reverse process, which is more common in England than in this country. There they rob the depreciation and reserve funds of the municipal plants to "relieve the rates," that is, decrease the tax levy, or accomplish the same result by raising the price of gas or electricity, thus compelling the users of these commodities to bear more than their share of the city's expenses.

BETTER THAN SPANKING.

the city's expense

Spanking does not cure children of bed-wetting does not cure children bed-wetting. There is a constitutional cause for this trouble. Mrs. M. Summers, Box W. 8, Windsor Ont., will send free to any mother her successful home treatment, with full instrutions. Send no money, but write her to-day if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine dif-ficulties by day or night.

Dog's Company.

In the north of England, where rabbit coursing is a great sport, swift, well-trained dogs often win large sums in prizes; consequently the owners of these animals bestow much attention on them.
