

In Summer Diarrhoea USE ALPHOZONE

In summer diarrhoea or in any bacterial infection of the alimentary tract, Alphozone is employed with excellent results. Being soluble, it is convenient to carry and to use; and the solution when made is immediately active--there is no waiting for its activity to develop.

Alphozone is as germicidal as mercury bichloride, but is non-toxic.

Alphozone is 3300 times as powerful as U. S. P. hydrogen peroxide. A 1-to-2500 solution kills all ordinary pathogenic germs on contact.

Sample on application.
