Plate 2 with
Shadow-rods.

(Plate "S.") SHOWING barely 3 PER CENT. of the GREAT PYRAMID'S immense: WIDTH of 760 FEET. The British Navy Bandamen are standing upon the vast "Shadow-floor," which is only laid on the North side. Behind their feet is the now rugged but originally finely finished "Foot-line" of the Pyramid, across which the Egyptian year-ending Shadow flitted at noon on the day the Sun concurrently crossed the Equator and the Pyramid's Meridian at the March Equinox, marking that now world-wide central point of Astronomy, "The First Point of Aries," the Pyramid system originated by locating its position in the Star-sphere, pointed by the Pyramid's Apex that mid-night. That secret Calendar system of exclusive advantages was more essential to ensure yearly food to the Egyptians than the British Navy is to safeguard the conveyance of food to the British Empire. The Priest-guided Ruler of Egypt zealously secreted knowledge of their shadow-code, as British Admirals secrete their vital code of signals.
