

**BUSINESS NOTICE.**  
The "Miramichi Advance" is published at Chatham, N.B., every Thursday morning in time for despatch by the earliest mails of that day.  
It is sent to any address in Canada or the United States (freight prepaid by the Publisher) at One Dollar and Fifty Cents a Year. If paid in advance the price is One Dollar.  
Advertisements, other than yearly or by the season, are inserted at eight cents per line (four words per line) for the first insertion, and three cents per line for each continuation.  
Yearly, or season advertisements, are taken at the rate of \$5.00 an inch per year. The matter, if space is secured by the year, or season, may be changed under arrangement made with the publisher.  
The "Miramichi Advance" has the largest circulation distributed principally in the Counties of Kent, Northumberland, Gloucester and Restigouche, New Brunswick, and in New Brunswick and Cape Breton, and communities engaged in Lumbering, Fishing and Agriculture. Subscribers receive superior inducements to advertisers. Address: "Miramichi Advance, Chatham, N.B."

**WOODED BY PROXY**

Cyril Hecroft went to this dinner engagement at Tara Lodge with mixed feelings. The memory of that absurd affair of the morning still haunted his thoughts. He recalled what sort of a reception would await him if he were to appear there. He was not a man who would look at a dinner, would he? He would be a laughing stock. He would be a laughing stock.

**DECAYED TEETH.**  
Many Maladies Are Traceable to Them.  
Statistics published by the Royal Dental Hospital lend color to the belief that decayed teeth are the cause of many diseases.

**DR. A. W. CHASE'S 25c CATARRH CURE**  
In most direct to the diseased seat of the trouble. It cleans the air passages, soothes the inflamed mucous membrane, and permanently cures. Sold by all druggists. Solely by Dr. A. W. Chase, 321 Adelaide St., Montreal, P. Q.

ed a lot of canal water and went home, just as he was. He looked at the dripping, I wagner!" said Tom, amid the prevalent laughter. "It was due to my short sight," explained, with amusing gravity. "Well," said Peter Weston, checking his watch, "I call it a thoroughly plucky thing to do. It was heroic."

**THE CARE OF MILK.**  
As soon as it is drawn, milk should be removed from the stable to a place provided for the purpose, and there aerated and cooled to 50 degrees Fahrenheit.

**FARM-FIELD AND GARDEN**  
OILING PAINT MACHINERY.  
It is safe to say that thousands of dollars are annually wasted unnecessarily through carelessness or ignorance in the oiling of farm machinery.

held there will remain sweet and in good condition much longer than if cooled to only 70 degrees or 75 degrees.  
WEANING PIGS.  
A series of eight experiments recently demonstrated the advisability of weaning pigs on soya as long as possible, consistent with the healthy and strong condition of the mother. The chief reason for this is that a sow and her pigs together will extract more nourishment from a given quantity of food than will the weaned pig alone.

**BE CHEERFUL.**  
The Kind Which Everyone Should Cultivate.  
To be cheerful when the world is going well with you is no great virtue. The thing is to be cheerful under unfavorable circumstances.

**About the House**  
USES FOR DRY BREAD.  
Bread crumbs. - The scraps of bread that cannot be used on the table can be placed in the oven, and dried or toasted a delicate brown, then rolled very fine, and placed in a clove jar or tin. When frying pork chops, veal, cutlets, fish, chicken, etc., dip the meat into the crumbs, letting them remain five or ten minutes, then add more egg and more crumbs, and fry the hot fat. Serve on a hot platter, garnish with parsley.

**CALF FOOD.**  
A mixture which has been very largely used, and which excellent results, by an extensive breeder, consists of two parts of barley meal and one part of bran. The mixture should be kept clean, a point very generally neglected. One kind of grain or grease may be made to answer for the bran, but it is never to be used where the best is available. A farmer cannot afford to carry a stock too much like material, but a dollar or two judiciously invested in the purchase of a few bags of bran will, instead, providing the oil is made intelligent use of, pay for itself many times over.

**WATER IN THE SOIL.**  
The more the soil is pulverized, and the better its condition, the less capacity to hold water. Standing water in undrained soils absorbs heat, and it is not drained off as fast, leaving the soil cool. Every barrel of water evaporated by the soil, takes away 800 B.T.U. of heat. It is required to evaporate the same quantity of water in a cauldron, from which and plants are drawn the want of heat absorbed by the water.

**A GHOST STORY.**  
Young Lady, Before Death, Saw Her Brother in a Dream.  
Here is an interesting story which we publish in our Daily News. A certain young lady who we will call "Mary A." was recovering from an illness. The doctor had declared her to be out of danger, and her friends and relatives were rejoicing in her recovery. The sister, however, was not so satisfied. She was a very sensitive person, and she was often troubled by dreams.

A. Ketcher's Barber Shop, Telephone No. 8.

Mother of pearl may be cleaned by washing in hot water and cold water. Never use whiting and cold water. A few drops of ammonia put in the water in which silver is washed will keep it bright, especially during damp summer weather. Insect specks may be removed from glued picture frames by dipping a small camel's hair brush in alcohol and applying it to the spot. To remove tar put soft grease on the spot, rub it thoroughly with the hands and wash both the grease and tar with warm salt water. To make dinner plates and dishes not become soiled by an outdoor trip, then in very hot water instead of putting them in the oven. Plates, cups, etc., should be washed and rinsed twice as long if treated in this manner. An excellent waterproof blacking for shoes and leather articles is made by mixing one part of borax with sixteen parts of melted beeswax stirred to a stiff jelly. Then mix five parts of asphalt varnish with six-and-a-half parts of oil of turpentine in which stir six parts of melted paraffin. After stirring thoroughly, some pine turpentine should be added in place of the beeswax. The result will be a nearly colorless waterproof coating. Hand water that is to be used for anything purposes can be made soft through the use of an oatmeal or bran bag. This bag should be made of a couple of thicknesses of orange cloth, and the whole should be used in place of a wash cloth. Orange and lemon peel are used for softening sweaters, and when also used in a refreshing perfume. The leaves should never be thrown away. They are excellent cleanser of woollen fabrics, especially carpets. Give them a good airing. The carpet just before sweeping. They can also be put to other uses. When a rug is stained with oil or grease, it is better to do it with nearly cold water, and use the water for rinsing. Use a little salt. It is easily cleaned by rubbing it with flannel that has been dipped in the same liquid. Place handkerchiefs which have washed in warm water in which there is a little salt. Wash with a castile soap only should be used. Washed in this way they will look like new. They should not be dried, but should be spread out smoothly on marble or glass by patting down. Never wash any of them thoroughly dry fold evenly and smooth with the hand. The weight of same kind. Handkerchiefs laundered in this way will last a long time.

**TO RENOVATE CANE CHAIRS.**  
Wash the seats with soap and hot water - not soda. If it makes them yellow. Turn the chair upside down, wet the seat well on the inside, push the buttons to the right side, and leave to dry. Then repeat the process. Should the canes be much discolored, wash them over with a weak solution of vitriol and water. Dry in a shady place. Good drying weather should be chosen for washing the chairs; or, if done in winter, dry before a fire, with the legs and under side of the seat towards the fire. It is a great mistake to allow the canes to get very dirty before attending to them.

**SNEEZE SAYINGS.**  
It is a very curious thing that all over the world there exists the same superstition in regard to the apparently trivial matter of sneezing. In nearly every language under the sun there is some equivalent of "God bless you" in French, "grace to you" in Italian, "inhabitants in the country will save the person who sneezes." In the most of these superstitions the sneeze is believed to have the character of a "death of cold" by a single sneeze - which killed him. In England a regular custom is to say, "God bless you," after every sneeze. In Italy, "God bless you" is said after every sneeze. In France, "God bless you" is said after every sneeze. In the United States, "God bless you" is said after every sneeze. In Germany, "God bless you" is said after every sneeze. In Russia, "God bless you" is said after every sneeze. In China, "God bless you" is said after every sneeze. In Japan, "God bless you" is said after every sneeze. In India, "God bless you" is said after every sneeze. In Persia, "God bless you" is said after every sneeze. In Arabia, "God bless you" is said after every sneeze. In Africa, "God bless you" is said after every sneeze. In America, "God bless you" is said after every sneeze.

**THINGS WORTH KNOWING.**  
A few cloves put in the ink bottle will prevent the contents from moulding. A hot solution of salt and vinegar will brighten copper and tin ware. If door or window screens move with difficulty rub their edges well with hard soap.

**TOLD IN FIGURES.**  
Electric railways will 100 percent increase in the United States. The income of the British post office from money in envelopes having no postage is \$2,500,000 a day. The average yield of wheat in the West is four bushels per acre. Much more labor and fertilizer is given grain fields in the old country than in ours. An advertiser paid \$5,000 for the privilege of painting the name of his firm on his steamship in New York, where it could be seen from the North River ferries. At present there are employed on the Panama canal construction 1,200 laborers and foremen, 4,000 mechanics, and 100 civil engineers. They were employed by the canal company, and are being paid by the United States. The daily expense of the construction amounts to about \$50,000. "I am a self-made man," said the proud individual. "Well, you are all right except as to you the tree is cut down and the other part of the conversation. 'How's that?' 'The part you talk with is out a proportion to the part you talk with.'"
