A MODERN BORGIA

Professor Beaurigard of Buenos Ayres is said to have been an ornament of the Ecole de Medicine in the Argentine capital in 1894. After Dr. Beaurigard's sudden death, which an autopsy showed to have come from hydrocyanic acid self-administered, the doctor's butter confessed to having served to the gentlemen who dined at Dr. Beaurigard's table, morituri, creme de menthe, which had been iced under the doctor's personal supervisiton. The ice contained cholera germs. The guests went gway, and in due time died of cholera, which, in a South American seaport, excited no special wonder. The doctor was not investigating cholera; he was simply experimenting in advanced poisoning. First experimentum in corpore vill was his motto,—Harper's Weekly.
