CARITTE PATERSON MANUF'G CO.

Amattite roofing which is being exhibited by the Carritte Paterson Manufacturing Company along with their other products, is one of the best high grade ready-made roofings sold in this country. Before its introduction into this country, this roofing was manufactured in the United States by the Barrett Manufacturing Company, who are the largest manufacturers of roofing materials in the world. The Carritte Paterson Manufacturing Company state that this roofing is being used by the largest contractors in the province and is giving general satisfaction. It is also recommended by the board of fire underwriters, which in itself is a very strong commendation. Amattite roofing appeals to all careful buyers of such material on account of its inherent surface which does not require paint, and which is a very important fire retardant.

RUBEROID ROOFING

Murray and Gregory, Ltd., are the local agents for the Dominion of Canada Company of Canada, Ltd., Montreal, and have a large display of the old and reliable Ruberoid Roofing, Ruberoid Flooring, Insulating Papers and other products manufactured by the above well known concern. The roof of their booth is covered with Ruberoid Red Roofing, over which there is a continuous flow of water suggesting the waterproofing qualities of the fabric. The manufacturers representative, Mr. E. H. Cunningham, is looking after this end of the exhibit and will be pleased to meet all his Ruberoid customers, who should happen to be taking in the fair.

quickly stops cough, cures cold, breaks the throat and lungs. — 25 cents.

FAMOUS THOMAS CAR ATTRACTS ATTENTION

Shown by Maritime Garage Co., Sackville, at Entrance to Transportation Building.

One of the most valuable exhibits in transportation hall this year, and one that is attracting widespread attention, is the famous Thomas Flyer Champion Endurance Car of the world which is being shown by the Maritime Garage Company, of Sackville, N. B. The Thomas Car attained world wide fame in 1908, when it easily won the from New York to Paris world endurance race. Practically everyone is more or less familiar with the fact of the great race. The Thomas car left New York and went to Alaska, losing three weeks on the route, and thereby giving its competitors this great handicap. It crossed to Japan and toured through Manchuria, stopping on its way to pull some of its higher priced competitors out of holes where they had become disabled.

A throng of visitors stopped yesterday to carefully examine and admire this handsome car, and a trip to the exhibition would not be complete if one failed to take it in. It occupies a prominent space at the main entrance to the building, and is in charge of a courteous representative of the firm, who is always ready to explain to visitors its different points and advantages. It was brought here from the regular stock in Sackville of the Maritime Garage Co., who are agents for the Maritime Province. This company have for sale other models of cars with or without fore doors, for five or seven passengers, and which are sold in every province of the Dominion.

No one should miss seeing this car as it is undoubtedly one of the finest offered to the public in this province.

NEEDLER'S CONFECTIONERY

Messrs. Forsyth, Sutcliffe & Co., wholesale agents for the Dominion of Canada are making an attractive showing of Needler's Best English Sweets. They are also displaying their own make of Lime Juice, "Limo Dominica," and Howards and Mercha chemicals.

Agricultural Resources of the Province Are Admirably Set Forth

Display in All Lines of Fruit, Vegetables and Live Stock at the Dominion Fair Better Than Any Previous Show—County Exhibits a Striking Feature—What Has Been Done Under an Energetic Agricultural Department.

In no department of the great Dominion Exhibition is there better evidence of the progress of the province as shown by the superior class of exhibits as compared with previous years than among the fruit vegetables and county exhibits.

A few years ago it was the custom to hold the exhibitions much later in the autumn in order to collect a representative exhibit of the agricultural resources of the province. If an exhibition had been held in this city as early in the autumn as now, there would not have been enough material to fill one-half of the space occupied by the agricultural display this year.

In live stock the limit was a few pens and cattle sheds partly filled with animals of fair class, but almost any farmer could have done as well almost sure of capturing all the prizes in the class he entered because there were few if any animals in this province which could compete with him.

The province is fortunate, however, in having at the head of affairs now a government which has taken an active interest in agriculture and has lost no opportunity to benefit the farmer stock breeder or fruit grower. In live stock the strain of blood has been improved by wise importations of blooded animals and the result of this wise policy is seen in the splendid exhibits at the fair today.

In the fruit and vegetable showing the finest ever made here, and the success of the government's policy with the fruit raisers is seen in the fact that New Brunswick this year beats Nova Scotia in the apples shown which is most unusual. In small fruits also there is an excellent exhibit. In fact, if any additional evidence is required of the fertility of the acres of this province, it is found in the splendid display which is attracting so much attention in the agricultural hall.

The county exhibits are a feature of the agricultural display, and in many ways they afford a better chance to judge of the merits of the aggressive agricultural policy of the government than the general agricultural show, where the specimens are more distinctly classified, but do not present as good a collective effect. Victoria, York, Albert, St. John, Queens and Kings and Charlotte are the counties represented at the fair. A large display made by them is of a class to convince all doubters that the future of this province is largely wrapped up in the soil and its products.

The county exhibits are found of course in the agricultural hall and the arrangement of them is tasteful in the extreme. While the exhibit is of the most practical nature there has nevertheless been considerable attention to the arrangement and the result is more pleasing. It is a notable fact that the county exhibits more than any others illustrate the real agricultural resources of the province. In the special classes the best products of the farm are selected for competition and to a degree this is true of the county displays, but the fact remains that the county shows more nearly represent the resources of the counties represented.

The Victoria county exhibit is the first to catch the eye as the visitor enters the agricultural hall and the advantage has been taken of the location to make a most effective display. The exhibit is in charge of Donald Innes, of Tobique, himself one of the most progressive farmers of the province, and it is largely due to his energy and labor that the county is so well represented.

The Victoria county show is particularly strong in grains and grasses. Not less than 15 varieties of grain are shown in the shed and there is half a bushel of threshed grain of each variety to correspond. There are also fine showings of lax grass, alfalfa, clover, alfalfa, yellow and red clover and wild grasses. In vegetables there is a good showing of beans, turnips, potatoes, onions, sugar beets, and all lines of garden produce. In fruits the county also makes a good showing, apples and small fruits being displayed in attractive style. In bottled fruits there are 8 varieties shown.

The grain is the particular feature of this exhibit. The wheat is particularly well headed out and Mr. Innes says the crop in this will be heavy this year. He does not think that the province will ever be able to grow much grain for export, but does not see why every farmer should not grow enough for his own use. Most of the grain in the exhibit was taken from Mr. Innes' farm and he says he expects to have in the vicinity of 1000 bushels this year.

Albert County.

Albert county makes a particularly good showing of grain in the straw and also some of the threshed article, but in this respect does not show as many varieties as Victoria county. Albert however, shines in fruit and some mammoth fodder corn. In fruit there is a very fine display, apples forming the greater part of it. There are also some luscious looking grapes. Green vegetables and garden truck also show up well and in all the exhibit is a fine one well representative of the county. Albert county has already gained a reputation for its general farming land and the exhibit is a most creditable one to the exhibitors as well as a good advertisement for the aggressive policy of the agricultural department.

Charlotte County.

That the County of Charlotte which has a vast variety of resources is not behind in agriculture is evident to all visitors who look at the fine exhibit which is representative of this county. Charlotte county farmers are good stock raisers as well. The showing is fringed with grain in the straw, some of the designs being in a class that would make the farmer think twice before deciding to remove to the west which has been called the great bread raising section of the Dominion. Charlotte county can do some things in the bread raising line herself and this is abundantly proven in the exhibit shown, in addition to the grain there

is also a fine showing of fruits and vegetables. Some especially good squash and pumpkins are shown as well as the peculiar looking gourd squash.

York County.

York county exhibit bears the motto, "We Grow For Quality." This is probably true, but it is certain that this county is not out of the running when it comes to size as well. Potatoes are the principal feature of the exhibit and in this line there are no better shown. In fruits the county also makes a good show and the apples are features of the display. There are also some fine specimens of bottled fruits and some very good plums.

St. John County.

For a seaboard county, St. John makes a particularly good showing. There are some fine field roots, and some especially good cauliflower. Fruit lines are also well represented and an interesting feature of the display is a cantaloupe, representing a new departure in fruit culture in this county. The specimen shown while small, is undoubtedly one of the finest, successful maturity. In greenstuffs the exhibit is strong in cabbage and there is a very good collection of Scottish kale. The exhibit is nicely arranged in front of the display, the letters of the words St. John, being formed by blueberries on a background of cranberries.

Kings County.

While Kings county does not make a large showing of grain like some of the other counties, it is particularly well represented in vegetables. All lines of table vegetables being shown in good quantity. In fruit there is a good showing of melons, blackberries and apples.

Queens County.

While Queens county was not entered in the county competition, there is nevertheless a good showing. Prize-winning vegetables and fruits are displayed very largely, arranged by Mr. S. L. Peters, of Queenstown, and is a credit to his discriminating judgment.

Fruits.

The fruit exhibit which occupies space in the Agricultural Hall adjoining a very fine display of vegetables, is undoubtedly one of the finest that New Brunswick has ever put up. Fruit growers generally admit that this had been a backward season, late frosts did much damage, and as a consequence the season is fully three weeks later than usual. Yesterday among the visitors of the exhibit were two Texas fruit growers as well as an Ontario farmer who had much experience in the Niagara Peninsula. They made a careful examination of the fruit shown and afterwards expressed the opinion that had the fair been held a month later New Brunswick's display would be far superior to anything the Peninsula could produce, while the Texas gentlemen were quite outspoken in their belief that anything finer could not be found in the Southern States.

New Brunswick's display would be far superior to anything the Peninsula could produce, while the Texas gentlemen were quite outspoken in their belief that anything finer could not be found in the Southern States. New Brunswick's display would be far superior to anything the Peninsula could produce, while the Texas gentlemen were quite outspoken in their belief that anything finer could not be found in the Southern States.

The new cattle sheds are better than any shown heretofore, every care has been taken with the animals on exhibition, they have been the centre of attraction almost from the start, and Thursday, the fine weather being particularly auspicious for breeders, live stock facilities, found the cattle sheds crowded.

In the dairy cattle the most interesting show is made by Ayrshires, there being 24 herds. In this class McIntyre Bros. of Sussex, were particularly successful, capturing both prizes. They showed 25 animals and their herd was noted for its size, uniformity and as producers. M. H. Parlow, of Lower Mills, showed 13 animals, winning 3rd in a herd prize and taking a number of individual prizes as well. The outside competitor was P. D. McArthur, of North George Co., Que., who secured 2nd prize in the competition for breeders, and altogether made a good show of animals. For competitors were James Barrett & Sons, of Crouville, Retson Bros. of Truro, C. P. Blanchard of Truro, S. (Freight) of Silver Falls, and Charles Syme of Minville.

The Ayrshire herd attracted most attention, and old cattle men say that never was there such a competition, there were no outstanding winners. In Jersey's there was good competition. A feature of this class was the presence of a fine herd of Ontario Jersey owned by B. H. Bull & Sons, of Brampton, Ontario. They are exhibiting in Toronto, and have about 25 animals in the local show. Other strong competitors were Josselyn and Young of Silver Falls and H. S. Pike and Sons of Amherst, Robert Robinson of Sussex, and S. Creighton of Silver Falls.

In Guernsey's, P. E. Island breeders had the competition to themselves, there being two contestants, James Roper and Sons of Charlottetown. In beef cattle there was a good show of Herefords and the animals shown by W.W. Black of Amherst, and William Robertson of Amherst, were of high class.

In herds C. A. Archibald of Truro had 15 fine animals on exhibition. R. A. Snowball of Chatham showed ten. In dairy grades McIntyre Brothers of Sussex again made a splendid show with 15 head of Ayrshire. S. Dickie and Sons, Lee & Clarke, and James Barrett were other competitors in these prizes. In fact, cattle in breed was a very good showing.

Small in numbers, but high in quality, could best describe this display. Some very classy animals were shown, a feature of the display in a litter of little pigs.

The sheep were much better than previously, some very fine animals were shown from York County. In Cotswold the Competition was practically narrowed down to animals shown by Howard Corning of Chagoggin. In Lincolns and Oxford Downs, competition was almost keen, while Shropshires and South Downs were well represented.

Horses.

In the horse classes there are some very fine animals shown. Probably the Clydesdales attract the most interest, and some of the Clydes importers by the Government make a particularly fine showing. There are also several of the thoroughbred Kentucky horses which were imported by the Government shown, as well as the progeny of those which were purchased by local parties.

In the Clydesdale classes there are fully twenty horses shown, and they are all of high class. In the Clydes a visitor won the grand championship and gold medal for the finest stallion. The fortunate man was T. B. Macaulay, of Hudson Heights Quebec. Mr. Macaulay is one of the most noted horse fanciers in Canada, and his animals have taken prizes all over Canada. For the best Clydes mare the medal and championship was won by R. A. Snowball, of Chatham. Mr. Snowball also won the prize for the best Canadian bred stallion.

There was also a good representation in Hackneys, and some fine horses were shown. Horsemen pronounced the Hackneys the best ever shown here and the competition was very close. In the brood mare class there were four animals which completely outclassed anything in the line seen here previously. This was also won by Mr. Snowball with Langton Lily, a fine mare who has won the Royal prize on two occasions in England in competition with the best.

The Percherons also made a fine showing. In thoroughbred horses there were some splendid animals. Owners of Provincial Government imported horses did well with them, as they easily topped the list in their classes. In coach horses the entry list was not large, but the animals shown were very fine.

Taken altogether the horse show is a fine feature of the fair, and the horse stalls are a favorite attraction for visitors.

Acetylene on a Scientific Basis.

P. Campbell & Co. Show The Latest in Modern Lighting Systems.

One of the most attractive and interesting exhibits is that of Messrs. P. Campbell and Co. (balcony, main building), who manufacture the "Scientific" Acetylene (gas) Generators. Various machines are shown, suited for all classes of buildings, residences, stores, halls, churches, colleges, factories, mills or any structure where light is required. The machines are all automatic in operation having no storage of gas, responding readily to the requirements for one light, or a hundred. They use small carbide, an amount of which are shown. A new feature, peculiar to these machines, is an "indicator" which shows at a glance from a distance the contents of the carbide chamber by a graduated chain index. This makes a positive register, and applies to no other machine made. This firm for many years has made a specialty of this branch and has developed what is now the highest grade acetylene machine in Canada. They exhibit views of many private residences, churches, public buildings, stores and factories throughout the provinces. We note many in Quebec, while prominent amongst the number in the eastern

section we find that of Prof. Alexander Graham Bell (of Telephone fame) in Cape Pontine. There are also many churches, convents, presbyteries, municipal buildings, banks, colleges, as well as the wayside country store, showing a wide range of patrons, which now run into the many hundreds. The compactness renders it most convenient as there is but one cylinder with no complicated mechanism. The operation of the gas bell being positive renders it most simple and safe to operate. It is fitted with interlocking gear and quickly thrown in or out of action by one motion.

This firm also exhibits a nice line of chandeliers, wall brackets, portable table lamps, as well as church light. This is a large opal glass cone reflector of artistic design, many of which they have furnished. Gas hot-plates are also shown, a very convenient appliance for light house-keeping, where acetylene is used. This is also suited for millinery and other trade purposes.

Another special feature in the development of this business is the "Contractors Light." This is a new design for use in railway, dock, excavation or construction work, where an intense light of great power is required, being wind-proof, of such construction that the ordinary workman can operate it with best results. This firm carries all necessary supplies in large quantities, carbide, gas fittings, burners, and have a large staff of experienced men for installing this work.

Many a growing boy or girl is set down as constitutionally slow, stupid or lazy when it is really a question of inactive bowels, lazy liver or sluggish kidneys.

The growing child, with a hearty appetite, certainly cannot long remain healthy and bright if the bowels, the bowels and the kidneys, are choked up with impurities that should be thrown off promptly.

The muddy complexion, dragging limbs and dislike for mental or physical effort show plainly that the child needs Dr. Morse's Indian Root Pills to stir up the liver and kidneys and regulate the bowels. Dr. Morse's Indian Root Pills do this most effectively, cleansing the whole system, purifying the blood, aiding the digestion and giving plenty of life and activity. As upon the education obtained may depend the success in life of your boy or girl—see to it that the general health of the child is such that study is pleasure and not a hardship.

Made from roots and herbs by W. H. Comstock Co., Ltd., at Brockville, and sold by all dealers at 25c. a box.
