

A TEXT-BOOK ON THE DISEASES OF WOMEN.

By ALEXANDER J. C. SKENE, M. D.,

Professor of Gynecology in the Long Island College Hospital, Brooklyn, N. Y.; formerly Professor of Gynecology in the New York Post-graduate Medical School and Hospital, etc.

SECOND EDITION.

With Two Hundred and Fifty-four Illustrations, of which one hundred and sixty-five are original and nine Chromo-lithographs.

Sold by subscription only.

This treatise is the outcome and represents the experience of a long and active professional life, the greater part of which has been spent in the treatment of the diseases of women. It is especially adapted to meet the wants of the general practitioner in recognizing this class of diseases as he meets them in every-day practice and in treating them successfully.

The arrangement of subjects is such that they are discussed in their natural order, and thus more easily comprehended and remembered by the student.

Methods of operation have been much simplified by the author in his practice, and it has been his endeavor to so describe the operative procedures adopted by him even to their minutest details, as to make his treatise a practical guide to the gynecologist.

Although all the subjects which are discussed in the various text-books on gynecology have been treated by the author, it has been a prominent feature in his plan to consider also those which are but incidentally, or not at all, mentioned in the text-books hitherto published, and yet which are constantly presenting themselves to the practitioner for diagnosis and treatment.

The illustrations are mostly entirely new, and have been specially made for this work. The drawings are from nature, or from wax and clay models from nature, and have been reproduced by processes best adapted to represent in the most truthful and permanent forms the exact appearances of the diseased organs, methods of operation, or instruments which they are designed to illustrate.

Wherever it has been possible to make clearer the author's methods of treatment by histories of cases which have actually occurred in his practice, this has been done. A simple, typical case, such as is ordinarily met with, is first described, and then difficult and obscure cases, with the various complications which occur. The history of such cases and the methods of examination and treatment are so minutely detailed as to serve for guides in similar cases.
