BURNELL'S

FOUR POINTED GALVANIZED STEEL BARB WIRE FENCING.

There are now before the public a number of Four-Pointed Barbs, which to the casual observer, are similar in appearance to the Burnell Barb which we are making, but a close examination of them will show the difference and their inferiority.

The Grand Trunk Railway Company of Canada give its preference over all others, and have contracted with us for over one hundred tons of fencing for immediate delivery.

This Barb was patented in the United States in 1877, and is no infringement on any other patent, and we will defend dealers and consumers against the threats of pretended monopolists. We claim superiority for our Barb Wire over all others for the following reasons:

1st.—We use only the best quality of Galvanized Annealed Steel Wire.

2nd.—The two strands of No. 12 Wire are twisted together just enough to allow for the contraction and expansion of the metal, caused by heat and cold, and not to touch as to injure the structure of the steel.

3rd.—The Barbs on our Wire are *top-pointed*, thus always presenting a High Point, or a *right angle*, which is a great advantage over the *low-pointed* Barbs, as cattle are unable to get against the fence in front, and push it down.

4th.—The Barbs are fastened to the Wire at intervals of 2 inches, by a *stronger* entirely different from any other, being secured by a *strong* and *strong* both which, so that they cannot be *loose* or *loose*, and thus prevent the *loose* of the cable, should either wire be broken.

5th.—The *new* by which the Barbs are put on is so perfect that the *new* are not injured or *loose* by the process, as is the case with other Four-Pointed Barb Wires.

Manufactured by the CANADA WIRE COMPANY, Montreal.
