CHICAGO, June 20.—Belief that J. P. Bickell & Co., Standard Bank rains had fallen at the right time for the Chicago Board of Trade: the greater part of the spring prop

inclined to the view, that barring some portions of South Dakota, the spring sown fields are in good shape. Timely moisture for the final filling of winter wheat in Nebraska, tended also to favor the bears. The fact that the first car of new wheat arrived here had some sentimental effect. Good support at a moderate decline prevented any decided break.

Buying for Export.

Purchasing by seaboard export concerns amounted to 380,000 bushels here and to a generous total at Duluth. These transactions helped raily prices and the tone at the end was fairly steady.

Prospects of general rains made corn

hese transactions and the tone at the end was steady.

Prospects of general rains made corn weak. Some of the recent large longs went over to the short side.

Oats succumbed to heavy selling due to an expected drenching east of the Mississippi.

In provisions the main feature was large longer.

BUYING IS LIMITED

At such times as the present, when the buying is limited the cautious investor sees his opportunity to pick up mining issues. Just as soon as the demand increases prices will rise, and shares bought now will be available for sale at a profit. Except to hold the price down for the purpose of accumulation, it is very doubtful whether PETERSON LAKE would be offered at 23½. These shares should be bought and held. Consult or write us for information on mining stocks.

The Profits of Mining

close application and the expenditure of money to mine profitably, investors are seeking promising mining stocks as the one invest ment not unreasonably hazardous that promises large returns on the capital invested. Mine-making is taking the place in the public mind that it has until lately taken in realty.

That it is deserving of the attention and the money of the investor is emphasized by the following statement of dividends declared and paid by the producing properties in Cobalt to January 1. 1913, amounting to \$38,551,033. La Rose netted the former owners \$1,204,862. O'Brien and Drummond may be estimated to have returned over \$3,000,000 to the owners, in addition to the they are small in comparison with the dividends declared and paid in the month of April of this year by the metal mines in the United States, as compiled by one of the leading mining journals, which gives the total at \$43,594,693, which went to the fortenate owners of stock of American mines and works, thus proving that a good mine in the hands of intelligent, successful mining operators affords the most profitable and satisfactory investment

Such a combination we offer you in the King's Quicksilver Mining Company, Limited, incorporated under the Ontario Companies Act, with an authorized capital of \$1,000,000, divided into 1,000,000 shares of the par value of \$1,00 each, and controlled by Wm. Gray of London; Geo. Weir, Dresden; T. Fred. Shurly, Galt and Elmira; F. J. Darch, London; T. E. Bradburn, ex-M.P.P. Peterbero'; J. Fergus MacGregor, Galt, and Thos. J. Wilkins, Stratford. A little ofer a year ago these gentlemen purchased the above property, and a development campaign was inaugurated, and is being prosecuted with their characteristic vigor. The mine is proving to be one of most extraordinary merit, and Mr. A. A. Lewis, the company's engineer, reports that he now has blocked out and ready for treatment 104,167 tons of ore, which is enough to keep a 30-ton plant busy 24 hours per day for nine years. which means a monthly output of over 600 flasks of quicksilver, New and up-to-date furnaces and concentrators have been ordered. and will be shortly installed, after which substantial dividends should follow, as quicksilver, or mercury, as it is often called, is the cheapest ore to extract and treat, and brings on the market about \$50 per flask of 75 pounds, which allows of a very hand-

Never before has the outlook for a proven quicksilver property been so bright, owing to the material decrease of quicksliver for consumption and the increasing demand for that product. The consumption is mainly in the manufacture of fulminate for explosive caps, of vermilion, of drugs, of electric lighting apparatus, of scientific apparatus, and in metallurgy, in the recovery of gold and silver, principally of gold by amalgamation.

The material decrease in domestic stock of quicksilver became marked in the United States survey of 1911. This resulted in the heaviest importation and the lightest exportation in many years, which resulted in an excellent market and at a consider betterment in price per flask. There is very little prospect for materially increasing the output from the old producing mines and the eventual working out of the well-known deposits will probably barely be offset by the development of the new ore bodies now discovered, making the outlook for a good producing
