Securities.

Saturday Evening, March 19.
A revival of outside speculative interest in connection with the Cobalt stocks has been the outstanding feature f the mining markets of late, and unfer an increased volume of trading from day to day, securities have dis-played a better tone than has been the use for some little time. With the in-oming of spring it has been the gen-cal custom to look for a broader folwing in regard to these stocks, and om present indications it is apparent hat this year wil not be a laggard in his respect. Already prices in certain nstances have undergone material appreciation, and from the attitude of the general list, it might be inferred that but very little stimulus will be needed to inaugurate an upward movement which will carry quotations up all round. The public show a disposition to enter more enthusiastically into transactions, and with an improved demand for some of the active specialties already realized, advances thruout the general list should prove easy to accomplish

The idea has been advanced that considerable of the increased buying of Cobalts in New York during the past few days is due to the fact that the United States speculative public has become dissatisfied with the actions of States. the various copper stocks, which they were lead into purchasing at the time when the billion dollar copper merger was first promulgated. During the past few weeks it has been repeatedly runored that President Taft would put is veto on the immense project, which ad as its objective the amalgamation of the principal copper producers of the United States and Mexico. While these reports have been denied almost as soon issued, speculators and investors ave become exceedingly nervous as to Buffalo the ultimate fate of the proposition, and as despite some six months' dickring, the whole idea of the merger is as yet in the air as far as results are cerned, it is only natural to look for more or less liquidation in the coppers from dissatisfied holders. With the Cobalt issues coming into more favor lowers, these funds have been diverted likely that this will be still more evident later on in the spring. Whether there be justification in this report or not, the fact remains that within the not, the fact remains that within the past week or so there has been an almost complete reversal of sentiment in Nova Scotia nost complete reversal of sentiment in Ophin relation to the Ontario silver securities Ctisse in the American metropolis.

With the announcement that cheap Silver Leaf ... power is at last a reality in the Cobalt Silver Bar eamp, and with the certainty that extensive and aggressive development. Timiskaming tensive and aggressive development ping mines will be considerably augmented during the next few months.
In this respect such properties as the

tion to move either way. With the statement of the company that the mine will be able to maintain itself on a dividend basis of 15 per cent, quarterly, and suggestions in certain quarters as to the possibilities of increased dis-

News from the mining camp in relation to the respective properties has revealed nothing spectacular during the past week. Strikes have been reported in the underground workings on some of the mines, while general operations at 7. of the mines, while general operations in the camp have continued satisfactory so far as known. The boom days of the mining field appear to have disappeared and the management of the leading mines have gotten down to developing their ore reserves, reducing expenses, keeping down capitalization and earning dividends for the stock-bolders. That this will prove of benefit holders. That this will prove of benefit to the markets for mining issues, no one can doubt. The fact that the Cobalts withstood the slump in silver prices—one of the most remarkable drops in the price of silver metal that have occurred in many years-without a tremor, demonstrate that values have to 13; een established on good foundation, and with a continued good outside speulative interest in the market, trading sentiment favors a good undertone in most sections of the list for the imdiate future, provided that no deter-

> Gold is gold, and whether mined in Ontario or Australia, it is worth its weight the world over. Porcupine, assisted by industry and integrity, will-prove itself to be one of the greatest assets of Ontario, and will vie with Sudbury's nickel and Cobalt's silver in the mineral production of the world. Gold is the most precious of all the rare metals. A gold camp draws capital and capitalists from all parts of the world. Gold camps, when not purely dependent on placer mining, are last-ing camps. Porcupine is likely to be a permanent camp, and somewhere around Porcupine Lake will be one of the biggest cities in Northern Ontario. a permanent camp, and somewhere the biggest cities in Northern Ontario. For some time there has been considerable rivalry as to where this city will be centred: but now it is conceded beyond doubt that the hub of the district is the Porcupine City Townsite on the northwest corner of the lake. This is the townsite on which This is the townsite on which
