### CHURCH NOTICES

Centenary Church.  
Morning service, 11 a. m., Rev. H. E. Thomas, Evening service, 7 p. m., Rev. G. F. Camp, Sunday school at close of morning service, Centenary Marsh Bridge Sunday school, 2:30 p. m., Marsh Bridge evening service, 7 p. m.

Exmouth Street Methodist Church.  
Rev. W. W. Brewer, pastor, United service between Exmouth street Methodist church and Brunswick street Baptist church, Service 11 o'clock a. m., in Brussels street Baptist, Rev. Hedy Pierce, preacher, 2:30 p. m., Sunday school, also Glad Tidings Hall Sunday school, Service, 7 p. m., Exmouth street Methodist church, Rev. M. P. McCutcheon, preacher.

### THE OLD MAN'S VICE

Tight-lipped and keener than a hawk was Reverend Hedy Pierce. A good investment, safe and sane, he never dared to miss. He picked up houses here and yon, Industrials and such, And really, Hedy's dividends Bado fair to beat the Dutch.

He made his money honestly As every preacher must, He never gossiped a brother man, Or bought a thing on trust. And yet, his eye grew keener still, His glance was more intent, To find some new investment which Would yield him eight per cent.

In time he ceased from active work, As oft he had desired, His forty years of life complete He gracefully retired, But still his mind had much to do As here and there he went, Considering investments which Were good for eight per cent.

To Scotland he must needs repair, He always longed to know The place where Knox was wont to preach, In days of long ago, "You have some friends abroad?" we asked On information bent, "No, no," he said, "The only friend I have is—Eight per cent."

The dramatic critic of The London Saturday Review said concerning Charles Klein's play, "The Third Degree," "It is contemptible, work badly written, woodenly constructed, falsely imagined, empty of life or wit, and atrociously acted. Some day that critic will see a Musical Comedy—and have a fit."

### RED ROSE FLOUR

Comes in Bbls., Hf.-Bbls. and 24 1-2 lb. Bags.

WE ARE equipped with the latest and most exact instruments used for eye testing. If your eyes trouble you consult us. D. SOYANER, Optician, 38 Dock Street.

### LOST

LOST—Saturday morning, July 13, on King street or Haymarket square, a lady's silver watch, Flader brand, return to this office. Reward.

## OLD SOL IS BENEFICIAL, BUT TOO ACCUSTOMED TO MAN

### Different Nations Cope with Difficulty in Many Ways

### BATHERS AFFLICTED

### City People on their Vacation Stay Out Too Long in the Sun without Wearing Hats—New Disease is Result.

With the equinox at the end of March we passed into the month of daylight exceeds the night, and now for all the months until the end of September we shall have more light than darkness.

Ordinarily light is assumed to be one of the most beneficial factors in life and health, and undoubtedly it is, yet in recent years there are many important observations with regard to the deleterious effect of light, especially of direct sunlight, on living things. Finson found by a series of interesting scientific experiments and observations, for which he was awarded the Nobel prize, that sunlight when concentrated could destroy certain pathological tissues that were of lessened vitality, and thus gave a strong hint to the possibilities of danger from overexposure to light.

While we think of the sunny days as the typically healthy, joyous, vital periods of life, it must not be forgotten that there are many more sultry, sultry days than sunny days during the summer than during the winter. While most of us are likely to think of the dark winter weather as more depressing and sultry, the summer weather is more generally the summer, it must not be forgotten that the maximum number of suicides during the summer months is in June, the month of sunlight that immediately follows the darker winter and spring months.

On the other hand, the smallest number of suicides occurs during December. The longest day in the year comes a little after the middle of June, the shortest day of the year a little after the middle of December. June is the month in which sunlight is most abundant, and December is the month in which sunlight is least abundant. Evidently sunlight, though supposed to be so good for health and good feeling, can by its irritative overstimulation produce even a depressive reaction. In recent years a number of medical observations have served to indicate that, like everything else, sunlight in excess may produce serious effects. The old Greek saying, "Too much is as true even of sunlight, in spite of its life-giving qualities in proper amount, as of everything else. A typical example is our very latest medical literature will serve to illustrate this.

We have made a very interesting discovery in disease here in the United States during the last three years. There is a curious mutilating disease which produces very serious effects on the body, sometimes causing even insanity, that has been observed in many of the Southern European countries. It is called pellagra and it has counted its victims by the thousands during the last century. For quite some time the disease did not exist in this country. Professor Osler, in his great text book of medicine, 1907 edition, declared five years ago that no cases of it had been observed. About three years ago, however, some suspicious cases were noted here and there through Southern States, and it was not long before it was found that these were pellagra. A somewhat remarkable fact about the disease is that a number of the insane patients in the Southern States were suffering from pellagra. The United States Marine Hospital Service sent an investigator to the Southern States last year and he brought back notes of almost four hundred cases.

### Girlish Complexion Now Easily Acquired

"A skin of blended snow, cream and rose" is the way an Ohio correspondent describes her newly acquired complexion. She is one who has adopted mercerized wash in place of cosmetics, massage, steaming and other methods. Many who have tried this marvelous wash report that its effects are quite different from those of any other treatment. It produces a complexion of exquisite girlish naturalness, rather than that artificial "made over." One that is indeed "Nature's own," the result of gradually absorbing the softening and surface skin, permitting the younger, healthier skin beneath to show itself and giving its pores a chance to breathe. Mercerized wash, procurable at any drug store in original one ounce package, is put on at night like cold cream and washed off in the morning.

I have also had many favorable letters from those who have tried the wrinkle-removing face bath which I recommended recently. If any have mislaid the formula, here it is: 1 oz. powdered azoic acid, dissolve in 1-2 pint witch-hazel—Jules O'Neil in The Clubwoman.

Naturally we are very much interested in the cause of the disease. It has been attributed to the eating of diseased grains, especially maize, on which, under the name of pellagra, the Italian peasants live so largely. That explanation, however, has not satisfied recent investigators, and the disease has evidently developed in persons in whom there was no question of the eating of spoiled corn or grain of any kind. It was attributed to flies for a time, and it was thought that these parasites carried their infectious material from one patient to another and that the disease was a slow running infectious and contagious disease. Even this explanation, however, has not entirely satisfied medical investigators. It has been of special interest, then, because it seems to help in the explanation of this curious disease.

Early Summer Vacations. There is more need for careful protection from the sun during the early portion of the warm weather, when after the darker months the system is as yet unaccustomed to it, than later in the summer. Physicians insist that vacations early in the summer are more beneficial than those taken in August, because toward the end of the summer men are accustomed to the heat and the sunlight and work easier in it. Hot, sunny weather early in July is particularly prostrating, and is likely to be followed by more heat strokes and by various nervous disturbances from irritative exposure to sunlight than later. Sunlight must not be considered as always beneficial. It must be admitted freely to rooms in order to cleanse them thoroughly, destroying the germs of disease, but living rooms during the hours of occupation should be well shaded. There is no justification in our present knowledge of the irritative effects of sunlight for that submission to discomfort from overexposure to sunlight in recent years, which some persons in recent years have taken up as a fad because they had received the impression that it was eminently hygienic. The instinct of man and the animal to get in the shade is founded on a great natural truth, and for the head is held, always should be implicitly trusted.

Danger in Exposure. Ordinarily it is presumed that sunlight is always very healthful. In the summer time people like to see their children get tanned well, and young folk, and even their elders, come back from their summer vacations proud to exhibit a good coat of tan. The physicians, however, who have observed that they have absorbed an immense amount of health giving sunlight, in recent years have been warning people, and especially in blond or fair people, sunlight can be very irritative, and when indulged in to excess, can produce even rather serious pathological effects. While it is good for plants even the leaves for protecting some of the more vital parts of the plant from too much sunlight. Still, sunlight is stimulating, and sunlight, but overstimulation is usually disadvantageous for living things, and such overstimulation by means of sunlight can be very serious.

There are decided advantages for health and sunlight. Some of these, however, indicate of nature that dangers there are in exposure to the sun. Nearly all microbes, for instance, die in the course of a few hours of sunlight. The heat of the sun, therefore, is one of the two easiest substances for humanity to obtain. The dust particles that are admitted into a dark room consist mainly of organic particles, most of them bacteria of various kinds. All the sun does is to make the immense number of such microbes present in the air quite harmless to us, and to make the sun itself healthy. It has been explained that the sun invites the microbes to dance in its rays, and that they once dance themselves to pieces. While the sun is thus healthful for us, it is also healthful for the microbes. It might be expected that it would have a similar effect on the cells of human beings. This is what has been actually found whenever special provisions are not made to protect human beings from sunlight. For quite some time the disease did not exist in this country. Professor Osler, in his great text book of medicine, 1907 edition, declared five years ago that no cases of it had been observed. About three years ago, however, some suspicious cases were noted here and there through Southern States, and it was not long before it was found that these were pellagra. A somewhat remarkable fact about the disease is that a number of the insane patients in the Southern States were suffering from pellagra. The United States Marine Hospital Service sent an investigator to the Southern States last year and he brought back notes of almost four hundred cases.

### IF ENGAGEMENT OCCURRED, ITALY HASN'T HEARD IT

### Officials State Destroyers Would Never Attempt to Force Dardanelles—May be Due to Panic.

Rome, July 19.—The Italian government, according to a semi-official note issued today, knows nothing of the reported action between a flotilla of the Italian torpedo boats and the Turkish forts at the entrance to the Dardanelles, except that several Turkish torpedo boats were destroyed. The Italian government, however, is not in a position to say whether the Italian destroyers engaged these vessels in battle.

"The idea that the Italian destroyers would try to force the Dardanelles," the semi-official note says, "is ridiculous. If the Turkish forces had been able to force the Italian destroyers to retreat, it would have been a great victory for the Turkish fleet. The Italian government, however, is not in a position to say whether the Italian destroyers engaged these vessels in battle."

### MONARCHIST WAR IS THE RESULT OF DEEP CONSPIRACY

### Hundreds of Arrests Are Being Made—Rebels Exported for a Term of Ten to Twenty-six Years.

Lisbon, July 19.—The Monarchist party, which was first believed, and is now being confirmed, that an extensive conspiracy which had been planned in a number of towns failed only because of personal rivalries. The troops are making hundreds of arrests. Jails are packed and courts martial are dealing with the conspirators as expeditiously as possible, pronouncing sentences of deportation varying from ten to twenty-six years.

### Disorderly House Raided.

Night Detective Lucas and Patrolman Perry, Written and Kane raided a house of ill-fame at the corner of Duke and German streets between twelve and one o'clock last evening. This house was run by a woman named Marie Macy, who was charged with running a house of ill-fame, while the others will have to face the charge of being inmates.

### BLAZE AT SUSSEX.

Special to The Standard.  
Sussex, July 20.—A barn owned by Mr. Faulkner, and situated at Sussex Corner, took fire about midnight and was totally destroyed. The origin of the fire is unknown.

Miss Blanche Kelly, Harland, N. B., was the guest of her cousin, Mrs. Luther B. Smith last week, at 35 Dufferin Row, West St. John.

## PORT COLBORNE TO HAVE NEW DOCKS FOR GRAIN SHIPS

Government Has Voted Substantial Sum for Improvements—Contract Has Been Awarded to M. J. Hogan.

Special to The Standard.  
Ottawa, July 19.—In connection with the contemplated improvements at Port Colborne as a grain distributing port, the government has decided to extend the present pier, to improve docking facilities for the steamers engaged in carrying the grain, and as well for shipping generally. The work will cost \$215,000, and a contract has been let at that figure to M. J. Hogan. The work will proceed at once.

### BOSTON GIRL'S LETTER

Boston, July 19.—The "graffe away," the "cane-hump walk," and the "wide-awake sit" are products of the hobbler strike likely to become accepted terms of Bostonese language, although they have not as yet found their way into the dictionary. The first mentioned, according to a local authority, is only acquired by the United States while a protest against study and assimilation, the "neck and head being held as with a view to scraping the lower strata of the clouds and swayed with a gentle motion like that of a balmine brush." The cane-hump walk results from the inability of the hobbled damsel to make her feet keep up with her head and shoulders, due to the check of each foot in mid-course by the willow of form. It requires some study and assimilation, the "neck and head being held as with a view to scraping the lower strata of the clouds and swayed with a gentle motion like that of a balmine brush." The cane-hump walk results from the inability of the hobbled damsel to make her feet keep up with her head and shoulders, due to the check of each foot in mid-course by the willow of form. It requires some study and assimilation, the "neck and head being held as with a view to scraping the lower strata of the clouds and swayed with a gentle motion like that of a balmine brush."

### Protests for Canadians.

Great Britain is also prepared to enter protests through her diplomatic representatives here on behalf of the ships owned by Canadian railroads against the provision in the pending bill barring railroad owned ships from the use of the canal.

Among the answers to these arguments which have been suggested to the state department and which have already become known unofficially to the British government are the following:

That the change of sovereignty in Panama since the Hay-Pauncefote Treaty was ratified alters the status of the entire matter and renders the treaty no longer binding. This argument, however, will not in all probability be very strongly urged, if used at all, inasmuch as the Hay-Pauncefote Treaty is generally interpreted to the effect that no change of sovereignty in the territory through which the canal passes shall affect the obligations of the treaty upon the contracting parties.

### Further Arguments.

In answer to these statements the British officials have further arguments ready. They will hold that the United States is the one nation which has the least interest in the canal from a commercial standpoint, inasmuch as there is practically no American merchant mine engaged in foreign trade, that if the United States desires merely a return upon its investment it will

## PLEA BASED ON FRIENDSHIP

Great Britain Will Point Out Generous Action in Treaties in Support of Panama Canal Protest.

Washington, July 19.—Though the formal statement of the British position on the Panama Canal protest has not been received, the reasoning which the British protest is based on has been learned. Secretary Knox, it can be said, is already in possession of the arguments which Great Britain advances in the formal document now on its way to Washington. The British government, in entering its protest against the proposed canal legislation, will call attention to the fact that Great Britain has from the very first acted with the utmost good feeling toward the United States, especially in regard to the isthmian canal and matters affecting South and Central America generally. The United States will be reminded that the British Government cheerfully entered into an agreement facilitating the construction by the United States of the Panama Canal. The removal of the difficulties in the way of the construction of the canal by the United States while a protest against the construction of the canal by the United States was in progress, was proof positive of the friendly spirit, it will be stated. Had Great Britain refused to eliminate this treaty by declining to negotiate the Hay-Pauncefote Treaty, the United States would have been seriously embarrassed in its endeavor to construct the canal. The British government is likewise prepared to remind this government that Great Britain gave acquiescence to the fortification of the canal by the United States while a protest against its fortification was going up from other nations. It was assumed by Great Britain, it will be said, that the United States would coincide with the British interpretation of the Hay-Pauncefote Treaty and open the canal on equal terms to the ships of all nations, including American ships.

### Slump in Consols IS UNINTERRUPTED

London, July 19.—Consols continue to slip in the market, the decline in the price of the consols being uninterrupted since the 1st of July. The price of the consols is now at 104 1/2, a decline of 1/2 point since the 1st of July. The price of the consols is now at 104 1/2, a decline of 1/2 point since the 1st of July.

### WOODSIDE FARMER SUICIDES.

Special to The Standard.  
Frederickton, July 19.—Thomas Stenick, a well known farmer residing at Woodside, Sunbury county, near Ruessagorish Station, committed suicide this afternoon by shooting himself in the head. He was between 45 and 50 years old and married.

### HON. WM. PATTERSON ILL.

Special to The Standard.  
Ottawa, July 19.—Hon. William Patterson, former minister of customs, is seriously ill at the Russell House here. Some months ago he had an attack of heart trouble but recovered and had been in Ottawa for three weeks. He took a bath today and his condition is regarded as critical.

### GRAND MANAN RELEASED.

Special to The Standard.  
St. Stephen, July 19.—The steamer Grand Manan, seized at Eastport on Tuesday at the instance of the Bay State Dredging Co., was released this afternoon, under bonds of \$20,000. The case will be heard at Portland in September.

### REPUBLICAN LOSES SEAT.

Washington, July 19.—By a strict party vote the house elections committee today voted to unseat Representative Theron E. Catlin, of St. Louis, republican, and to seat former Representative Patrick Gill, democrat. Mr. Catlin's campaign expenses were so great that the committee held his election to have been corrupt.

### At The Hop.

The summer girl is rather strange. She has peculiar tricks. She dances when the mercury is stuck at eighty-six.
