TRADE MARK
Ploughs—Wilkinson
REGISTERED
U.S.S. Soft Centre Steel Moldboards, highly
tempered and guaranteed to clean any soil.
Steel beams, steel land sides and high carbon
steel coulters. Clevises can be used either
stiff or swing. Each plough is fitted espec-
ially with its own pair of handles—rock elm,
long and heavy and thoroughly braced. The long body
makes it a very steady running plough. Shares of all
widths—specials for stony or clay land. The plough
shown turns a beautiful furrow, with minimum draft
and narrow furrow at finish. Ask for catalogue.

Questions and Answers. Miscellaneous.

Swarms of Bees.

If bees belonging to A swarm and fly
into bush, and are found and hived by
B, who has rightful claim to those bees?
Ontario.

Ans.—The particulars given are hardly
sufficient for a definite answer; but the
matter is governed by "The Swarms of
Bees Act" (Revised Statutes of Ontario,
1914, Chap. 107). The Act provides
that where a swarm leaves the hive the
owner may re-claim them, so long as he
can prove his right of property in them,
and he is entitled to take possession of
the swarm at any place on which it set-
tles, even if such place be on the prop-
erty of another person; but the owner
must first notify the owner of such land
and compensate him for all damage.
There is the further provision that an
unpursued swarm which lodges on any
property without settling thereon may
be secured by the first comer unless the
proprietor of the land objects. Also, if
the owner of a swarm declines to follow
it, and another person undertakes the
pursuit, such other person is substituted
in the rights of the owner; any swarm
which is not followed becomes the prop-
erty of the proprietor of the land on
which it settles without regard to the
place from which it has come.

Impotent Bull.

I would like to ask a few questions in
regard to my stock bull. I only got
him this spring, and he was very thin
and lousy. He had been wintered out
of doors and was very badly kept. He
is keen and serves the cows all right,
but in three weeks they all come around
again. Do you think that by keeping
him over and feeding him well he will be
all right for another year?

A. E. J.

Ans.—It is impossible to be certain
that your bull will be useful next year,
even under the best of care. Many bulls
that are impotent when out of condition
prove to be all right when brought into
good flesh again. Some, however, do
not respond to such treatment, possibly
because of some physical imperfection,
which may be the case with your bull.
In any case it will pay you to get the
bull in good condition before you sell
him. Feed liberally on such feeds as
ground oats, bran, and clover hay, with
turnips when available. See that he gets
plenty of exercise; a run on good pas-
ture at night would be good treatment
for him. Such care should put him in
good order before winter sets in, when
he can be again tested. If he proves to
be impotent still, there is little hope that
he will ever be useful to you, and it will
hardly pay you to winter him. There
may be something wrong with the cows.
Contagious abortion sometimes takes this
form.

Horses on Railway.

One night last fall my horses got
through the railway's gate on my farm,
and three of them were killed. The
latch on the gate would go past the
steeples in the post and hook on the other
side of the steeples when you closed the
gate up tight to the post. I was
through the gate the evening before
about four o'clock and am sure I closed
the gate, but could not swear whether
the hook went into the steeples or over
it. I was the last one of my family
through the gate that day. The horses
were killed the following morning about
four o'clock by a light engine above the
curve, but could be seen for about 80
yards. The engineer did not whistle for
any of the crossings, or for the curve,
and he did not know he had killed the
horses until the next morning when he
was told by another engineer. I have
heard that the farmer is not responsible
for the gates until he applies to the
company for a padlock. Can I claim
damages for my horses? Who is re-
sponsible for the gates, providing the
farmer is sure he shut them?
Ontario. FARMER.

Ans.—We think that you are in a po-
sition to recover damages from the com-
pany. The burden would be on them to
prove that you closed the gate in a
negligent manner. They could hardly do
that. On the other hand, it was their
duty to furnish the gate with a proper
fastening. Proceedings to recover should,
of course, be taken promptly, as re-
quired by the Railway Act.

It takes a sturdy well- built engine for farm work

Constantly hauled from place to place,
one day working light, the next labor-
ing at full capacity—chugging away in
heat or cold, in damp weather or dry,
roughly handled—often neglected.

It isn't every engine that can stand up
under such a strain—year after year—with
little or no need for repairs.

Yet there are hundreds of just such
incidents in the life of the average.

Fairbanks-Morse Farm Engine

That's what it is built for—hard, heavy work
at many jobs.

And consider this—of the 160,000 F-M
Engines built during the past 25 years more
than 90% are still earning money for their
owners.

The engine pictured above is a full 5 h.p.
F-M Farm Engine. Price \$150.00, less skids,
f.o.b. Toronto factory.

Fully described in "Power on the Farm"
an interesting booklet for farmers. Sent free
