# NEW FIELD ROOT. Giant Sugar Mangel.

### GREATEST YIELDING ROOT GROWN. OF HIGHEST FEEDING VALUE FOR PRODUCING MILK, OR AS A FLESH FORMER.

Since the introduction of the Danish Sugar Beet, an extraordinary demand has been created for a field root containing a higher percentage of nutritive value as well as producing the large weight per acre usually attained from the Mammoth Mangel. This new root, now offered for the first time, and which we have named "Giant Sugar Mangel," is really a full blooded Sugar Beet, growing to an immense size and producing a heavier weight per acre than any Sugar Beet now before the public. The magnificent roots (well shown in the accompanying illustrations), are of the Giant Intermediate type, absolutely clean and free from the coarse and prongy roots so frequently found among Sugar Beets and certain classes of Mangel Wurzel. We have never seen a more handsome growing crop, the perfect shaped roots standing at least three-fourths out of the ground, with a rich pink and white skin contrasting with the upright deep green foliage cannot help but attract attention. The flesh, which is so exceptionally firm, is by far the sweetest of all roots, and greatly relished by all classes of stock. They are extra fine when cooked for the table. "Giant Sugar Mangels" are the easiest of all roots to harvest. "Push them over with your foot." No trouble to top them as the leaves grow upright and well together. The roots weigh heavier and will keep longer than either Carrots, Turnips or Mangels. Taking everything into consideration no better root for stock feeding has ever been placed before the public.

Every progressive farmer and dairyman will act wisely by giving Rennie's "Giant Sugar Mangel" a thorough trial.
