

not very largely attended by the Entomologists, the Association of Official Economic Entomologists was founded, and held its first meeting in conjunction with the Entomological Club, the result being that most of the papers read were of an economic nature. The minutes are published both in the CAN. ENT. and in *Entomol. Amer.*

At the Indianapolis, Ind., meeting in 1890, the Entomological Club was again well represented, and a successful meeting was held, as can be seen from the very full account published in the CAN. ENT., while the *Entom. Amer.* brought out a short abstract.

The number of members of the Entomological Club present at the Washington, D. C., meeting in 1891 exceeded that at any previous meeting, and the full record of the proceedings occupies 48 pages in the CAN. ENT. of the same year.

The Rochester, N. Y., meeting in 1892 was also very successful, and its record fills 61 pages of the CAN. ENT. The following officers were elected for the next meeting: President, Rev. Chas. J. S. Bethune; Vice-President, Mr. H. G. Hubbard; Secretary, Mr. C. L. Marlatt; but this "next" meeting was never held, nor is there any record of any subsequent meeting of the Entomological Club of the A. A. S.

Following the reading of this communication and the constitution of the Club, the question of membership was brought up by Mr. Marlatt. The subject was discussed by Messrs. Bradley, Schwarz, Ashmead, Hopkins, Felt and Marlatt. Mr. Marlatt moved to make section three of the constitution read as follows: "All members of the American Association for the Advancement of Science who are interested in entomology, and all members of the Association of Economic Entomologists, shall be *ipso facto* members of the Club. Other Entomologists may be elected to membership at any regular meeting." This motion, seconded by Mr. Ashmead, was carried. On motion of Mr. Hopkins, the following provision was added to this section: "Members of local entomological societies at the meeting place of the American Association of any year shall be considered as members of the Club."

The business of reorganizing the Club having been completed, Mr. Kellogg was invited by the President to give a report on the entomological work done under his direction on the Pacific Coast.

Mr. Kellogg first called attention to a very creditable piece of monographic work on Aleurodes by one of his students, exhibiting some especially well-executed plates illustrating these insects. This work is soon to
