If you dont buy um now, he will never print um again. Thus you see, 'tis in your power either to vex or please him. Do which you will, and so farewell."

Order and system, is of as much importance to the farmer as to other individuals, and a well arranged plan of operations is essential to continued success. "A place for every thing, and every thing in its place," is a first truth; a truth that proves itself, and of which the single enunciation is sufficient. The farmer then should have his farm divided according to system; his crops should follow each other in regular order; the influence of those governing principles should be felt in every department of his business; it should be seen in the feeding and management of his stock, in his fences and gates, and in his houses and barns.
