9 Alberton.		4 32	81.5	84	91	5 20	34,470

Only one sample, No. 9, obtained from the province of Prince Edward Island was reported to have been local grown. It was found to contain Cinquefoil, Chickweed, Sheep Sorrel and Chicory which were its only noxious impurities, and none of those except Chicory are considered dangerous weed pests. In sample No. 1, 1,100 Ergot sclerotia were found per pound of seed. This sample had been obtained from a Charlottetown seed firm and it is quite likely that the seed was grown on the Island as this fungus was seldom found in samples from Quebec or Ontario. Most of the seed obtained had passed through the hands of Charlottetown seed firms before reaching the local dealers from whom they were obtained.
