

### The Water Feed---The Big Thing IN CARBIDE LAMPS

The feed must deliver the correct quantity of water to maintain a steady flame, and the lower end of the water tube must be kept clear of the slacked carbide.

The ITP Float Feed supplies just the right quantity, and automatically breaks away the slacked carbide, maintaining a bright, steady, workable size flame from start to finish of charge.

When the valve is opened the water starts to flow at No. 1, the carbide starts to expand, raising No. 4, this carries with it No. 3. The result is the same as when other lamps are raked by hand, with this advantage, the raking is taken care of automatically at just the right moment, the carbide is never vigorously agitated, there is no excess generation and no gas is wasted.

Send us your name and we'll send you a lamp.

Toronto, Ontario

## OPPORTUNITIES

### --for-- Prospectors and Mining Companies

The mineral wealth of Northern Ontario is enormous. From a few developed areas a very large output of nickel, copper, silver and gold is being made. Many promising areas are awaiting the prospector and miner.

Recently Northern Manitoba has become an important producer of copper ore, and many promising gold deposits have been located. This is an excellent field for the prospector.

One of the greatest factors in development of mineral areas is the provision of transportation facilities. Railways and the mining industry have together played a very important part in the development of several parts of Canada.

The Canadian Northern Railway, recently constructed across Northern and Western Ontario, has opened up for prospecting a large territory. Easy access to many promising areas is now available. Geological maps of some of these areas can be obtained from the Geological Survey, Ottawa.

The Canadian Northern Railway in Manitoba gives access to the Pas Mineral Area. In Alberta the Canadian Northern is serving important coal fields.

### THE DEPARTMENT OF RESOURCES CANADIAN NORTHERN RAILWAY

The Department of Resources, Canadian Northern Railway Building, Toronto, will be pleased to furnish information about the districts served.

## The University of Toronto and University College

with which are federated

VICTORIA TRINITY ST. MICHAELS  
KNOX and WYCLIFFE COLLEGES

### FACULTIES OF

Arts, Applied Science, Music, Medicine,  
Education, Household Science, Forestry.

## WANTED

Copper Refiner, to take charge of copper cathode melting plant, casting various shapes, including wire bars. A practical furnaceman, who knows from years of actual experience how to fuse in a bottom, how to train a crew of "green" men, and can himself produce marketable copper, can secure a steady position, and a satisfactory salary, with a responsible smelting company. Apply Box N Canadian Mining Journal.

"All the land of the Algoma Central and Hudson Bay Railway Company (except 2½ townships), has been thrown open for prospecting for the period of two years."

No license is required: staking, recording and assessment work practically as on government land. Title in fee simple will be given when work is completed on payment of \$3.50 per acre and a small royalty payable when ore is shipped. For Regulations apply

The Lands Department  
Algoma Central & Hudson Bay Rly. Co.  
SAULT ST. MARIE, ONT.

## FOR SALE

One Litchfield Hoisting Engine, 18 in. cylinder, 32 in. stroke. Two 5 ft. drums with 4 ft. face and grooved for 1 in. rope. In excellent condition. One "WC" Sullivan tandem Air Compressor. Compound steam and two stage air cylinders. Corlies Valve Gear. Capacity 1,800 cu. ft. to 100 lbs. pressure per minute. For full information and price, address:
