

ately give their order, addressed to Mr. Leclerc or to us, as it would be necessary that gentleman should have some idea of the quantity required. We would observe that parties will not be bound to take the wheat unless the most satisfactory proof is given of its genuine quality, as three month wheat, of the same variety as was first imported into Canada about ten years ago, and cultivated for some time with so much success, and if it does not suit them in price and quality, and the price is not expected to exceed ten shillings the minote. So favorable an opportunity may not occur for years, and Mr. Leclerc is determined to visit the country where the wheat is grown, and obtain all the information possible about it. We require new seed, and we know by experience a suitable article cannot be obtained unless by a competent party visiting the country where it grows. Mr. Leclerc can there make arrangements for obtaining a regular future supply of seed wheat of the right description, so that it can be ordered whenever it may be required.

We beg to tender our thanks to B. P. Johnson, Esq., Secretary of the New York State Agricultural Society, for a copy of his excellent "Report on the Great Exhibition of the Industry of All Nations in London in 1851." Mr. Johnson was well qualified to make such a report, as Agent of the State of New York, appointed to attend the exhibition. The Report forms a neat volume of 193 pages, and contains a plan of the Crystal Palace, and several other illustrations. We have also to thank Mr. Johnson for sending us annually, the "Transactions" of the New York State Agricultural Society, which always contains a vast amount of useful and interesting information. We are sorry we cannot make a better return to Mr. Johnson, than a copy of the Agricultural Journal.

We beg to remind subscribers to the Agricultural Journal, that payment is now expected for the present year, together with any

arrears previously due to the Society. Subscriptions to be paid to the Secretary and Treasurer of the Society, Wm. Evans, Esq., at the Rooms of the Society, No. 25 Notre Dame Street, Montreal, or to be sent through the Post Office, Montreal.

We have received a letter from George Buckland, Esq., Secretary of the Upper Canada Agricultural Association, stating, that at the Annual Meeting of that Association, on Friday, the 24th of September last, it was resolved unanimously—"That the thanks of the Association be communicated to the Delegates of the Lower Canada Agricultural Society, for their attendance on the present occasion," referring to the Toronto Exhibition which took place last September.

The Chemico Agricultural Society of Ireland, at one of their late meetings adopted the following resolutions, and as they are as applicable to Canada as to Ireland, we copy them:

2. "Believing the publication of the reports of the society, and the various communications read at the monthly meetings, calculated to diffuse much useful information and to promote the improvement of the country, the meeting calls upon the proprietors and farmers of the province to sustain the council in this department of their operations for the ensuing year."

3. "Fully recognising the advantages to be derived from the application of science to the business of the farmer, and believing that, as in all other professions, it is requisite for those who desire to maintain their position to avail themselves of every improvement which is calculated to introduce economy or greater certainty into their operations, the meeting regard the opportunities which the lectures and various meetings in connexion with this society affords to the farmer of Ulster of acquiring professional information, as of great importance to the cause of agricultural improvement in this country."

#### AGRICULTURAL REPORT FOR OCTOBER.

The month of October was as favorable for agricultural purposes as could be expected. The land was generally in good order for ploughing, and the weather was sufficiently dry for taking up the root crops, and storing them in good condition, and this is a matter of importance to those who grow
