

observations on the relation between climate and characters, it may be of interest to note that in a considerable series of *Chloralcitus*, the tegulae are dark in those species which come from the north and the mountains, light in those from the south and lowlands. Thus:

Tegulae dark. *H. cressonii*, *nigroviridis*, *viridatus*, *perdifficilis*, *versans*, *ruidosensis*, *hortensis*, *planatus*, etc.

Tegulae light. *H. semibrunneus*, *sparsus*, *floridanus*, *ashmeadii*, *versatus*, *zephyrus*, *gummatus*, *brunerii*, *exiguus*, etc.

A LIST OF SYRPHIDÆ OF NORTHERN INDIANA.

BY M. R. SMITH, RALEIGH, N.C.

The following is a list of Syrphids collected in the vicinity of Plymouth, Indiana, during the summer of 1918. As the writer does not think he will have opportunity to collect in this region again, this short list is being published with the hope that it may be of interest to the Syrphidologist and to those interested in working up the State's fauna.

To Mr. J. M. Craig much credit is due for assistance in collecting.

The writer also wishes to acknowledge his indebtedness to Mr. C. L. Fluke for a number of the determinations.
