

Dr. Laphorn Smith, of Montreal, presented a paper on *A Case of Total Extirpation of the Urinary Bladder for Cancer*. General considerations: Evolution of the operation in Europe and America; methods employed; results in 100 reported cases. In the author's case there had been previous removal of fibroid by myomectomy. This was followed by cystitis, which was treated, first by medicine, then by injection and afterwards by drainage by permanent catheter, and then by button-hole operation when the cancer was detected by the finger. Extra-peritoneal removal of bladder and affected part of ureter and pelvic glands. Recovery from operation, but death on the 7th day from exhaustion.

THIRD DAY.

General Morning Session.
