

- e. Submunitions including bomblets, minelets and terminally guided projectiles, except submunitions using a solely lead core.
- 2. This Item does not cover ammunition crimped without a projectile (blank star) and dummy ammunition with a pierced powder chamber.
- 3. Governments may permit, as administrative exceptions, the shipment of the following ammunition or cartridges, provided they are for weapons exportable as administrative exceptions under Note 1 to Item 2001:
 - a. Target ammunition or cartridges with an expanding bullet of the type used for hunting or sport;
 - b. Ammunition or cartridges specifically intended for the testing of firearms.
- 4. The Committee will favourably consider exports to the People's Republic of China of the following:
 - a. Small arms ammunition, except anti-armour ammunition, or ammunition for use with equipment described in Item 2001 b. and c.;
 - b. "Conventional unguided projectiles" of the point-detonating contact and mechanically-set time-fused types incorporating unitary high explosive warheads only; and complete safing, arming, fusing and firing devices therefor, up to the calibre of 156 mm (106 mm for tank guns and tank destroyers); and specially designed components therefor, except products which include projectiles incorporating super quick or grazing sensors or multi-option fusing;

2004. Bombs, torpedoes, rockets and missiles, as follows, and specially designed components therefor:

- 2004. a. Bombs, torpedoes, grenades (including smoke grenades), smoke canisters, rockets, mines, missiles, depth charges, fire bombs, incendiary bombs and military demolition charges, devices and kits, pyrotechnic flare signals for military use, cartridges and simulators;
- b. Apparatus and devices specially designed for the handling, control, activation, powering with one-time operational output, launching, laying, sweeping, discharging, detonation or detection of items enumerated in sub-item a.;
- c. Military fuel thickeners, including compounds (e.g., octal) or mixtures of such compounds (e.g., napalm) specifically formulated for the purpose of producing materials which, when added to petroleum products, provide a gel-type incendiary material for use in bombs, projectiles, flame throwers or other implements of war.

NOTE:

The Committee will favourably consider the export to the People's Republic of China of the following equipment and specially designed components therefor:

- a. Land mines employing mechanical initiation, except those designed for extended on station time or for remote or autonomous activation or deactivation;
- b. Military demolition charges;
- c. White smoke, i.e., hexafluoroethane, red and white phosphorous, in canisters or grenades;
- d. Pyrotechnic flare signals, except flares designed for use as infrared sources or decoys;
- e. Unguided rockets and their launchers, with unitary high explosive warheads having a maximum range of 20 km, and not capable of delivering a payload in excess of 26 kg, and with the launcher to round interface restricted to the minimum required for motor initiation;

N.B.:

This does not include rocket assisted projectiles (RAPs).

- f. Anti-tank weapons having all of the following characteristics:
 - 1. An effective range of less than 1 km;
 - 2. Not specially designed for use against phased armour;
 - 3. Not incorporating autonomous guidance;
 - 4. Not incorporating electronic counter-countermeasure features; and
 - 5. Not incorporating technology affecting weapons performance which was in initial production less than seven years before the time of export;
- g. Conventional unguided high explosive bombs employing unitary warheads with surface impact or fixed height-of-burst fusing, except those incorporating fuses having

counter-countermeasure features and components of such fuses.

2005. Fire control systems and sub-systems, as follows, specially designed for military use, and specially designed components and accessories therefor:

- 2005. a. Fire control, gun laying, night sighting, missile tracking and guidance equipment and target surveillance equipment;
- b. Range, position and height finders, spotting instruments, detection, recognition or identification equipment and sensors integration equipment;
- c. Electronic, electro-optic, gyroscopic, acoustic and optical aiming or sighting devices;
- d. Bomb sights, bombing computers, gun sights and periscopes.

NOTE:

The Committee will favourably consider the export to the People's Republic of China of equipment embargoed by this Item, as follows:

- a. Optical fire control and optical gun laying equipment not incorporating any electro-optical counter-counter measures (ECCM) features and limited to those operating in the visible spectrum;
- b. Single channel, fixed frequency, mechanically scanned radar fire control equipment, except those having one or more of the following characteristics:
 - 1. Operating frequency of 18 GHz or more;
 - 2. Clutter discrimination or rejection features other than MTI systems employing conventional double or triple delay line cancellation;
 - 3. Phase code agility;
 - 4. Pulse compression techniques;
 - 5. Electronic counter-counter measures (ECCM) devices or features, including display of jammed spectrum or secondary lobe jamming;
 - 6. Sidelobe cancellation or blanking;
 - 7. Protection against anti-radiation missiles, including real-time emission control features;
 - 8. Electronic beam steering;
 - 9. Over-the-horizon capabilities;
 - 10. "Laser" techniques;
 - 11. "Spread spectrum";
 - 12. Chirp techniques;
- c. Land systems gun sights or periscopes not incorporating technology affecting weapons performance which was in initial production less than 10 years before the time of export;
- d. Bomb aiming equipment, as follows:
 - 1. Optical (visible spectrum only);
 - 2. Mechanical;
 - 3. Non-microprocessor controlled;
 - 4. Not incorporating interfaces to terminally guided weapons;
 - 5. Not incorporating technology affecting weapons performance which was in initial production less than 10 years before the time of export.
(For equipment using image intensification or thermal imaging devices, see Item 2015.)

2006. Vehicles, as follows, specially designed or modified for military use, and specially designed components therefor:

Technical Note:

For the purposes of this Item, the term 'specially modified for military use' means a structural, electrical or mechanical change which entails replacing a component with at least one specially designed military component, or adding at least one such component.

- 2006. a. Tanks and self-propelled guns;
- b. Armed, armoured vehicles or vehicles fitted with mounting for arms;
- c. Armoured railway trains;
- d. Half-tracks;
- e. Recovery vehicles;
- f. Gun-carriers and tractors specially designed for towing artillery;
- g. Ammunition trailers;
- h. Amphibious and deep water fording vehicles;
