Fax: 519-756-9062

Export Contact: Mr. Vincent Harold, Vice President/Sales Manager

Marketing Profile

Eagle Precision Technologies Inc. was established as Eagle Precision Tool Limited in 1958, with its roots in the precision tool making industry. Eagle has retained its toolmaking skills while specializing in the design and manufacture of tube and forming machinery, tube bending machinery and machinery to produce exhaust silencers (mufflers), catalytic converters, exhaust pipes, resonators, tubular manifolds, struts and shock absorbers.

While Eagle's main customer base has been automotive and automotive parts manufacturers, its products also have tubular applications in non-automotive industries such as aircraft and furniture. Eagle is a totally integrated manufacturer with its own design, fabrication, machining, assembly and testing facilities located in 75,000 square feet in two factories in Brantford, Ontario. They currently employ 155 people in Brantford largely consisting of design engineers, machinists, toolmakers and electricians.

Eagle's largest market is the U.S. automotive parts industry. However, its products are used by manufacturers in over 30 countries worldwide including Mexico, Sweden, Australia, Russia, and Japan. They have recently received the first contracts for equipment from the People's Republic of China and Tunisia.

Products/Services Available for Export:

Tube Ending Forming Equipment
Tube Bending Equipment
Silencer (Muffler) Manufacturing Equipment
Custom Designed Tube Manipulation Machinery
