To Whom It May Concern

This is to certify that I have been attending Mr. Onefrey (Fred) Glute, of Veregin, Sask.

Mr. Glute is thin, anemic, weak, and is a poorly developed individual. His weight is 118 pounds. He has some gastric symptoms which upon taking an X-ray of the stomach, I find that he has a deformed duodenal cap, which is due to a duodenal ulcer or possibly malignancy of the stomach. He also has an enlarged prostate gland which causes frequent micturition. Recently he has developed pruritis of the perineum.

Due to the above conditions and his advanced age (68 yrs), Mr. Glute can do very little if any hard physical labour.

*Born June 25
1877*
