IT PAYS TO GO TO THE BEST.

THE *Canada Business College*

CHATHAM, : : : ONT.

Canada's greatest school of shorthand and business training, RE-OPENS FOR THE FALL TERM, TUESDAY, SEPT. 5TH. 226 OF OUR PUPILS SECURED GOOD POSITIONS IN THE seventeen months ending JUNE 1st, 1899. What do you think of such a record? Our pupils are now in strong demand with many of the leading business houses. When we tell you this large number secured positions, we are also prepared to furnish the list showing where they were placed and with whom. If interested, write for it.

THE BEST SCHOOL IS THE CHEAPEST IN THE END.

We pay the railway fare of students coming from a distance, provided it does not exceed \$5.00, which is the limit of our allowance in this connection. One secure good board for gentlemen at \$2.00 to \$2.50 per week, and for ladies at \$2.00. During the year which closed June 30th, we had pupils in attendance from Newfoundland to the Atlantic, to Seattle on the Pacific; from Manitoba on the north to Brooklyn, N. Y., on the south. There were 133 Cities, Towns and Villages in Canada, and five States of the Union represented with us. Twenty-three Counties and Districts outside of Chatham, sent us 193 pupils, Chatham and Kent County alone sent us over 100 pupils, while Manitoba and the North-west Territories sent us six—WHAT WE GET WE HOLD. Write for handsome catalogue of either department. Mention which catalogue you want.

D. McLACHLAN & CO.,  
Chatham, Ont.

## Ordered Clothing

When you are ready to order your new Suits and Overcoats call and see us, we guarantee to save you money. We carry the largest range of patterns of any Tailoring establishment in Ontario. Besides our own make we carry a full range of the best Tweeds and Worsteads. A perfect fit and first class trimmings guaranteed.

## Ready-Made Clothing

Made at our own make of goods. See our \$3.00 Suits; see our \$5.00 and \$6.00 Suits reduced to \$2.50. We have the best all-wool Pants in the world. Come and see them. For best Hats, Shirts, Dress Goods, Shirts, Coatings, Yarns, Socks, Mitts, &amp;c., come and see us! Family Flour and Feeds of all kinds.

## A VERSATILE MAN

WAS F. G. WHITE, THE ACTOR—HE KNEW HOW TO PUT UP

A Curtain Which is More Than Most Stage Managers do—The Important Part a Barrel Played in the Drama of the "Hidden Hand."

Many of the old time actors will remember F. G. White, who, with his wife, Emma Leland, used to star in the provinces when they were not able to get into the cities. Well, what they wanted in the cities, the old gentleman was a versatile genius, and there was nothing about the house except a barrel that he could take. Among other things he knew how to put up a curtain, and that was more than a good many stage managers in the country towns knew.

We will call the place Bridgeport, for that was not the name of the town. The Emma Leland company was there for a week, and it looked like a prosperous run. But the first night, and right between the first and second acts of "Hidden Hand," something went wrong with the curtain, which stuck fast three feet from the floor. Moreover, it would not come down again, and the people out in front were getting more than the worth of their money without seeing the show. Mr. White was in his dressing room, having changed from a well dressed New York citizen to the rough and ready countryman from old Virginia, who has come to the great city on a quest for his granddaughter and adventures. But he climbed up on a stool out there behind the curtain and did all that any honest old plain speaking man could have done in the way of making the machinery work.

And the whole curtain came tumbling down, roller and all, leaving the most versatile man stranded high and dry on the top of the stool. The scene was the Bowery, and a part of the stage setting was an empty barrel. The old gentleman dropped gracefully into the barrel and rolled as gracefully off the stage. And then the patient and excellent audience waited, laughing occasionally, but not saucily, till the carpenters and others in the house had repaired the damage to the scene.

A Sixteenth Century Knave.

The late Father Knapp had a predecessor in his cold water cure over three centuries ago in the person of Father George Bernard Penot, a Dominican friar of Toulouse, born near Nice about 1521. In his book "De Aquae Naturalis Virtute," published in 1547, Father Penot wrote: "In the morning, when the dew of heaven gives new freshness to the earth, thou shalt walk for two hours barefooted, and have lagged upon the grass, for the dew is the daughter of God. It brings with it a certain mysterious virtue, which diffuses itself in various forces throughout the microcosm and driveth away malign influences. Fear not that the chill shall do thee evil, for all cold is the source of all heat, and water is the vehicle of health and the paragon of life." Surely this is Knappism in a nutshell, yet Father Penot died unknown and unappreciated—Tablet.

And She Probably Would.

A good story is going the rounds at the expense of a well known newspaper woman. Rhys married and blessed with two golden haired little daughters, who promise to possess all their mother's intelligence.

Recently Marion, the younger (that is not her name, but it will do for the story), went to the study and said:

"Oh mamma, Sissie and I have such a lovely secret about our dolls. I would like to tell you, only"

Mamma looked up from her work and inquired:

"Only what, dearie?"

"Only I'm afraid you would write it up."

Knew What He Wanted.

"Gimme a dish o' wuth o' dried beef an' sum crackers," said Uncle Josh to the young lady in charge of the ribbon counter in a down town store.

"You have evidently made a mistake in the place," she smilingly replied.

"This is a dry goods store."

"Waal, now, I reckon I know'd that," b'gosh," said the old man, "an' ef dried beef an' crackers ain't dry goods, then I'd like to know what in tarnation you'd call 'em?"—Chicago News.

For the hide of a full grown giraffe, greatly sought after in Africa for whip and saddle making, the native hunters get from \$15 to \$25.

The most common name for a place in England is Newton, which occurs no fewer than 72 times.

Money is the root of the manufacturing plant.

But few women have time to look like their portraits.

"Wise is the famous man who doesn't overwork his popularity."

Beauty may only skin deep, but it invariably manages to get a seat in a crowded street car.

An old bachelor says the average wait of women is until they are asked to marry.

Money brings happiness to some men because of the interest they derive therefrom.

## Home Cheesemaking.

Experience Needed to Reach the High Standard Which the Market Now Demands.

As a general rule home butter making can be made to pay better than home cheesemaking and with less labor, although I have known many instances where this has been reversed, writes George E. Newell in the Boston Cultivator.

The writer, having been conversant with the cheesemaking industry from boyhood, would not advise any one to go into it at home without some previous practical knowledge of the business.

The markets of the present day call for cheese of a certain standard quality, whether of domestic or factory manufacture. This standard must be a first class one in order to obtain a profitable price, and unless one feels full confidence in his ability to meet market requirements he should consider milk as too valuable material to experiment with.

Nearly every one, however, who contemplates home cheesemaking possesses a general idea of the subject, with more or less experience, and to such I direct my remarks. You will not find it profitable to attempt home cheesemaking with too small a quantity of milk. Would you place the minimum daily quantity that you should attempt to make up at all at 150 pounds, while 300 pounds and from that up would be better.

Do not attempt the manufacturing task with crude apparatus any more than you would think of producing No. 1 butter from a ramshackle churn. Aim to have a cheese factory in miniature, without, of course, many of the accessories that a large factory would find necessary. The heating arrangement of your dwarf vat should be perfect and above reproach. A fine lined wooden tank, in which rests on supports a removable tin receptacle for the milk, should be used.

There should be from one to two inches of water space between the tin and zinc sides and bottom, the water of which can be heated from a copper flue, with zinc water packet under all. This is simply a counterpane in principle of the old fashioned factory underheated vat, and I believe can be obtained in any size of most manufacturers of dairy apparatus.

In the improved modern factory vat steam from a furnace instead of the water under the vat supplies the heat, the principle of cooking the curd being the same.

While obtaining a small vat from a reliable dealer one had better get all the other accessories necessary, as they will be better suited to the purpose if made by an experienced manufacturer than a local workman.

The apparatus necessary to equip a small cheesemaking plant ought not to cost much if any more than the utensils properly required to turn a like quantity of milk into butter. While aiming to make the same quality of cheese that comes from a larger factory, you should understand that the greatest opening for the sale of dairy cheese lies in the direction of small bulk.

The demand for fine full cream cheddar cheese that do not weigh over five or ten pounds apiece is never fully satisfied. Most factories object to producing them on account of the increased labor involved and the larger percentage of milk necessary to make a pound of cheese. The increased rate is caused by the more extensive evaporation of moisture from the small cheese than from the large ones.

It should be borne in mind, however, that these diminutive cheese bring a better price in market than the large ones solely on account of their size. I earnestly advise those dairymen who contemplate home cheesemaking at all to manufacture only small size stock if they would sell it readily for a good price.

Do not go into the business, however, unless you have some previous knowledge of it, as it will not prove profitable to experiment with so valuable a product as milk.

In curing these small cheese be careful not to have the apartment too dry. Wide awake dairymen not afraid of lots of work and with some previous knowledge of the business can certainly make home cheesemaking profitable by following the plan outlined above.

Dairy Blood at Fair Prices.

Again we call attention to the fact that good dairy bred cattle can be had at quite reasonable prices. In fact we believe that this is a good time for those who need this kind of stock to invest in it. It is not hunting buyers at scrub prices, but as compared with the way other classes of pure bred stock are selling it looks cheap. There will sooner or later be a reaction from the craze for beef that has invaded the dairy districts, and with the dairy industry promising a healthy condition pure bred dairy cattle will be in better demand than now. The time to get good blood cheap is when it can be had. Those who let pass bargains in trotting bred mares, beef cattle and sheep a few years ago are paying much better prices for the same stock now, and they might have been sellers now instead of buyers had they invested at the lower prices then.—National Stockman.

Butter Texture.

Butter receives its texture and consistency in the churn during churning, and defects which are produced during churning can by no means be subsequently removed.

## SEA RUMBLINGS.

A STRANGE PHENOMENON THAT SAVANTS CANNOT EXPLAIN

Various Theories have been advanced as to the Origin of These Odd Sounds—Some Scientists Have Attributed Them to Earthquakes.

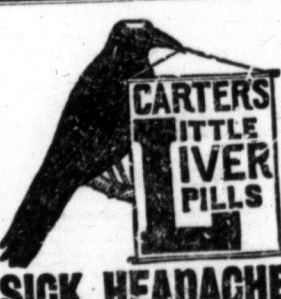

"Mistpoofers" (literally, "blowings or eruptions of the fog") is the name given by dwellers on the shores of the North sea, Europe, to a mysteriously auditory phenomenon not infrequently noticed in their vicinity, says Dr. Glan-

gand. Various theories have been advanced as to the origin of these sounds. Some savants have attributed them to earthquakes, but this fails to explain why they are perceived only in the daytime. On the other hand, the fact that their time of maximum occurrence is from noon to 3 p. m., decreasing afterward until sunrise, appears to support the opinion that they are due entirely to the action of solar heat upon the water vapor of the atmosphere.

It is remarkable that when heard on land they always appear to come from far out at sea, and similarly on board ship they never seem close at hand, and they strike the ear from all sides at once. Is there, then, asks the author, a mirage for the ear as well as for the eye? But, if so, how does it originate? On the Campus of Antwerp the noises were heard very distinctly—so much so, were heard very distinctly—so much so, effect—for several days in succession, by a party of French engineers, who at first thought that brick artillery practice must be going on somewhere in the neighborhood.

Near Ostend the coast population is quite accustomed to the mistpoofers. They often say, "There goes the sea gun," or, "There will soon be a change." Sailors at sea exclaim, "The fog is breaking," under the same circumstances. These facts all point to a relation with atmospheric phenomena.

Bright sunshine and some degree of foginess seem to be constant factors in causing the detonations, while the sea is not a necessary element. They are most probably due to a disturbance of electric equilibrium between layers of air when the inequality expanded by heat, under the influence of the special conditions already noted.—Popular Science.

CARTER'S LITTLE LIVER PILLS

SICK HEADACHE

Positively cured by these Little Pills.

They also relieve Discomfort from Dyspepsia, Indigestion and Too Hearty Eating. A perfect remedy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Coated Tongue, Pain in the Side, TORPID LIVER. They Regulate the Bowels. Purely Vegetable.

Small Pill. Small Dose. Small Price.

Substitution

the fraud of the day.
